Octal D-Type Flip-Flop with TRI-STATE® Outputs

General Description

The 'AC/'ACT574 is a high-speed, low power octal flip-flop with a buffered common Clock (CP) and a buffered common Output Enable ($\overline{OE}$). The information presented to the D inputs is stored in the flip-flops on the LOW-to-HIGH Clock (CP) transition.

The 'AC/'ACT574 is functionally identical to the 'AC/'ACT374 except for the pinouts.

Features

- I_{CC} and I_{OZ} reduced by 50%
- Inputs and outputs on opposite sides of package allowing easy interface with microprocessors
- Useful as input or output port for microprocessors
- Functionally identical to 'AC/'ACT374
- TRI-STATE outputs for bus-oriented applications
- Outputs source/sink 24 mA
- 'ACT574 has TTL-compatible inputs
- Standard Microcircuit Drawing (SMD)

Functional Description

The 'AC/'ACT574 consists of eight edge-triggered flip-flops with individual D-type inputs and TRI-STATE true outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold time requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable ($\overline{OE}$) LOW, the contents of the eight flip-flops are available at the outputs. When $\overline{OE}$ is HIGH, the outputs go to the high impedance state. Operation of the $\overline{OE}$ input does not affect the state of the flip-flops.
