**DUAL D-TYPE POSITIVE EDGE-
TRIGGERED FLIP-FLOP**

DESCRIPTION — The '74 devices are dual D-type flip-flops with Direct Clear and Set inputs and complementary (Q, $\bar{Q}$) outputs. Information at the input is transferred to the outputs on the positive edge of the clock pulse. Clock triggering occurs at a voltage level of the clock pulse and is not directly related to the transition time of the positive going pulse. After the Clock Pulse input threshold voltage has been passed, the Data input is locked out and information present will not be transferred to the outputs until the next rising edge of the Clock Pulse input.

TRUTH TABLE
(Each Half)

INPUT	OUTPUTS	
@ t_n	@ $t_n + 1$	
D	Q	$\bar{Q}$
L	L	H
H	H	L

Asynchronous Inputs:

LOW input to $\bar{S}_D$ sets Q to HIGH level
 LOW input to $\bar{C}_D$ sets Q to LOW level
 Clear and Set are independent of clock
 Simultaneous LOW on $\bar{C}_D$ and $\bar{S}_D$
 makes both Q and $\bar{Q}$ HIGH

H = HIGH Voltage Level
 L = LOW Voltage Level
 t_n = Bit time before clock pulse.
 $t_n + 1$ = Bit time after clock pulse.

ORDERING CODE: See Section 9

PKGS	PIN OUT	COMMERCIAL GRADE	MILITARY GRADE	PKG TYPE
		$V_{CC} = +5.0 \text{ V} \pm 5\%$, $T_A = 0^\circ \text{C to } +70^\circ \text{C}$	$V_{CC} = +5.0 \text{ V} \pm 10\%$, $T_A = -55^\circ \text{C to } +125^\circ \text{C}$
