

AN2516S

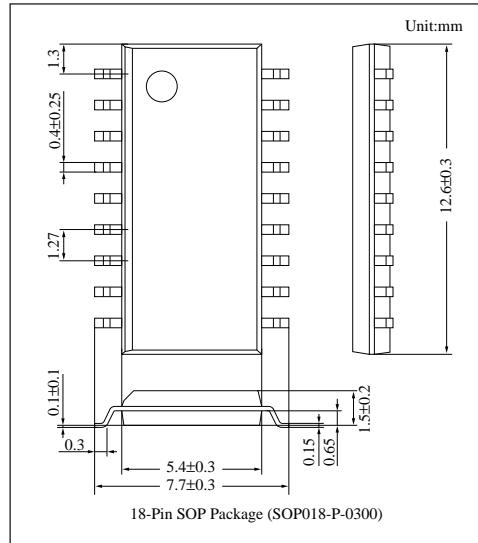

Electronic View-Finder Driving IC with Character Input

■ Overview

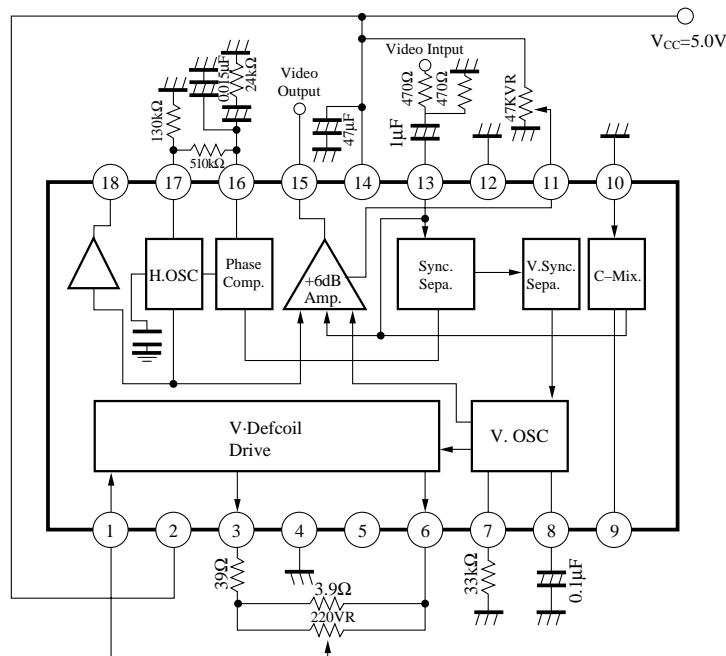

The AN2516S is a drive IC for an electronic monochrome view-finder of a video camera. The AN2516S has all the functions of the AN2515S except HD and VD output, and has attached γ -correction (which compensates luminance characteristics). It is easy to make up a 0.5-inch electronic view-finder with minimal external components.

■ Features

- Built-in video amplifier, synchronous signal separation, horizontal vertical oscillator, AFC, γ correction, character mixing, and vertical driver circuits.
- Direct drive of a vertical deflection coil available
- Built-in capacitor for vertical synchronous signal separation
