

FG/CTL amplifier

BA6305/BA6305F

The BA6305 and BA6305F are fast-response wave-shaping preamplifiers for use in VCR CTL amplifiers. They meet the fast REC mode to PB mode response required in VCR CTL amplifiers. The ICs contain a fast-response preamplifier (with precharge function) and a noise-rejecting hysteresis amplifier that converts the CTL signal to a rectangular-wave output. The hysteresis width can be switched between two levels to maintain the S/N ratio, and provide compatibility with various tape speeds.

● Applications

VCR CTL amplifiers

VCR FG amplifiers

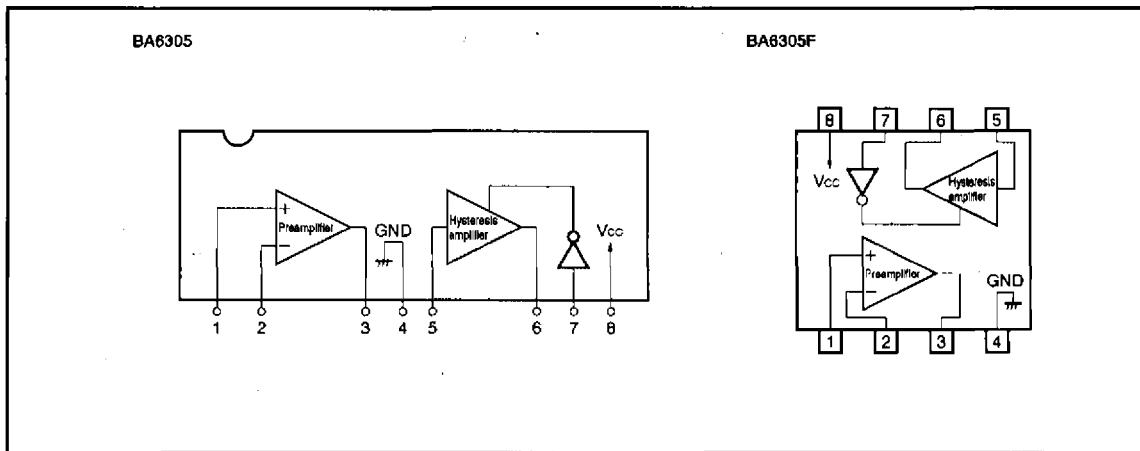

VCR DTP amplifiers

Other preamplifier and hysteresis amplifier applications

● Features

- 1) Fast response from strong input when recording to CTL signal playback when playing.
- 2) High gain.
- 3) Schmitt trigger circuit ensures high S/N ratio, and accurate hysteresis width and level.
- 4) The hysteresis comparator level can be switched to suit the CTL amplifier level.
- 5) Compact SIP 8 pin and SOP 8pin packages.
