

CD4018BM/CD4018BC Presettable Divide-by-N Counter

General Description

The CD4018B consists of 5 Johnson counter stages. A buffered \bar{Q} output from each stage, "CLOCK", "RESET", "DATA", "PRESET ENABLE", and 5 individual "JAM" inputs are provided. The counter is advanced one count at the positive clock signal transition. A high "RESET" signal clears the counters to an "ALL ZERO" condition. A high "PRESET ENABLE" signal allows information on the "JAM" inputs to preset the counter. Anti-lock gating is provided to assure the proper counting sequence.

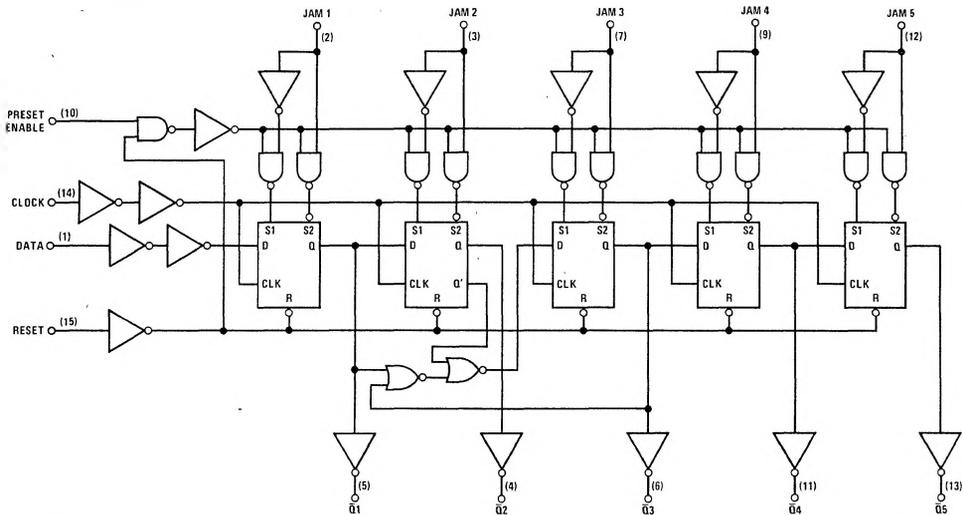

Features

- Wide supply voltage range 3.0V to 15V
- High noise immunity 0.45 V_{DD} (typ.)
- Low power TTL compatibility fan out of 2 driving 74L or 1 driving 74LS
- Fully static operation

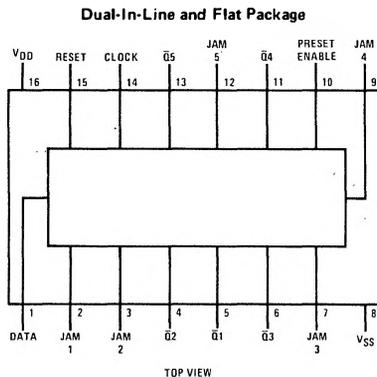

Applications

- Fixed and programmable divide-by-10, 9, 8, 7, 6, 5, 4, 3, 2 counter
- Fixed and programmable counters greater than 10
- Programmable decade counters
- Divide by "N" counters/frequency synthesizers

C _{IN} Average Input Capacitance	Any Input		5	7.5	pF
C _{PD} Power Dissipation Capacitance	(Note 3)		63		pF

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed; they are not meant to imply that the devices should be operated at these limits. The table of "Recommended Operating Conditions" and "Electrical Characteristics" provides conditions for actual device operation.

Note 2: V_{SS} = 0V unless otherwise specified.

Note 3: C_{PD} determines the no load ac power consumption of any CMOS device. For complete explanation, see 54C/74C family characteristics application note AN-90.

Typical Performance Characteristics

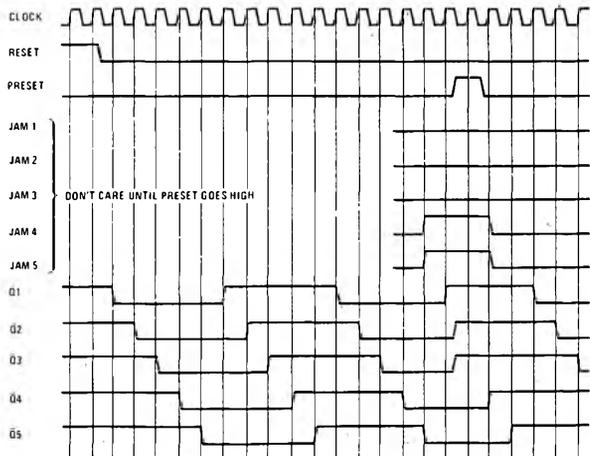

External Connections

External Connections for Divide by 10, 9, 8, 7, 6, 5, 4, 3, 2, Operation

Divide By 10 $\bar{Q}5$
 Divide By 8 $Q4$
 Divide By 6 $Q3$ Connected Back
 Divide By 4 $Q2$ To "DATA" Input
 Divide By 2 $Q1$

Timing Diagram

Note. "Data" input tied to $\bar{Q}5$ for decade counter configuration.
