

CD4089BM/CD4089BC Binary Rate Multiplier CD4527BM/CD4527BC BCD Rate Multiplier

General Description

The CD4089B is a 4-bit binary rate multiplier that provides an output pulse rate which is the input clock pulse rate multiplied by $\frac{1}{16}$ times the binary input number. For example, if 5 is the binary input number, there will be 5 output pulses for every 16 clock pulses.

The CD4527B is a 4-bit BCD rate multiplier that provides an output pulse rate which is the input clock pulse rate multiplied by $\frac{1}{10}$ times the BCD input number. For example, if 5 is the BCD input number, there will be 5 output pulses for every 10 clock pulses.

These devices may be used to perform arithmetic operations including multiplication and division, A/D and D/A conversion and frequency division.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed; they are not meant to imply that the devices should be operated at these limits. The table of "Recommended Operating Conditions" and "Electrical Characteristics" provides conditions for actual device operation.

Note 2: $V_{SS} = 0V$ unless otherwise specified.

Note 3: C_{PD} determines the no load ac power consumption of any CMOS device. For complete explanation, see 54C/74C Family Characteristics application note, AN-90.
