DM7123 Quad 2-Input Data Selectors/Multiplexers

General Description

This device contains four 2-input multiplexers with common input select logic and common output disable circuitry. The DM7123 provides TRI-STATE® outputs. When the enable/ strobe input is at a low logic level, the outputs of all devices are conventional TTL. However, when the enable/strobe input is raised to a high logic level, the outputs of the DM7123 go to the high-impedance third state. This device provides the designer with TRI-STATE and/or low power pin/pin replacements for the popular DM9322 and DM54/DM74157 multiplexers.

Features

- Pin equivalents popular DM9322 and DM54/DM74157 multiplexers
- Both conventional TTL and TRI-STATE outputs available
- Typical propagation delay 9.5 ns
- Typical power dissipation 200 mW

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range	
DM71	-55°C to +125°C
Storage Temperature Range	-65°C to +150° C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Recommended Operating Conditions

Symbol	Parameter		Units		
		Min	Nom	Max	•
V _{CC}	Supply Voltage	4.5	5	5.5	v
VIH	High Level Input Voltage	2			v
VIL	Low Level Input Voltage			0.8	v
Юн	High Level Output Current			-2	mA
IOL	Low Level Output Current			16	mA
T _A	Free Air Operating Temperature	-55		125	°C

Electrical Characteristics over recommended operating free air temperature range (unless otherwise noted)

lcc	Supply Current	V _{CC} = Max (Note 3)		40	51	mA

Note 1: All typicals are at V_{CC} = 5V, T_A = 25^{\circ}C.

Note 2: Not more than one output should be shorted at a time, and the duration should not exceed one second.

Note 3: I_{CC} is measured with the inputs grounded, and all outputs open.
