DS55115/DS75115 Dual Differential Line Receiver

General Description

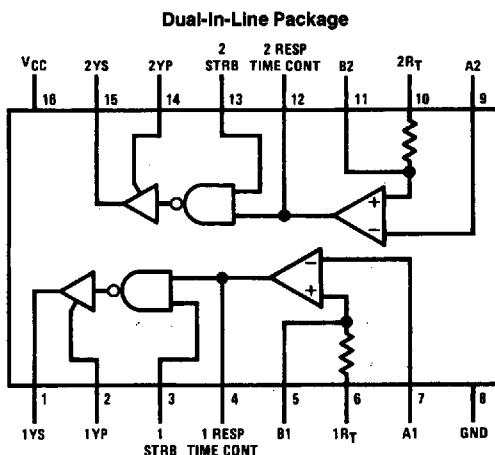

The DS55115/DS75115 is a dual differential line receiver designed to sense differential signals from data transmission lines. Designed for operation over military and commercial temperature ranges, the DS55115/DS75115 can typically receive ± 500 mV differential data with ± 15 V common-mode noise. Outputs are open-collector and give TTL compatible signals which are a function of the polarity of the differential input signal. Active output pull-ups are also available, offering the option of an active TTL pull-up through an external connection.

Response time may be controlled with the use of an external capacitor. Each channel may be independently controlled and optional input termination resistors are also available.

Features

- Single 5V supply
- High common-mode voltage range
- Each channel individually strobed
- Independent response time control
- Uncommitted collector or active pull-up option
- TTL compatible output
- Optional 130Ω termination resistors
- Direct replacement for 9615

Function Table

Strobe	Diff. Input	Output
L	X	H
H	L	H
H	H	L

H = $V_I \geq V_{IH}$ min or V_{ID} more positive than V_{TH} max
 L = $V_I \leq V_{IL}$ max or V_{ID} more negative than V_{TL} max
 X = irrelevant

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for the actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the -55°C to $+125^{\circ}\text{C}$ temperature range for the DS55115 and across the 0°C to $+70^{\circ}\text{C}$ range for the DS75115. All typical values are for $T_A = 25^{\circ}\text{C}$, $V_{CC} = 5\text{ V}$ and $V_{CM} = 0\text{ V}$.

Note 3: All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

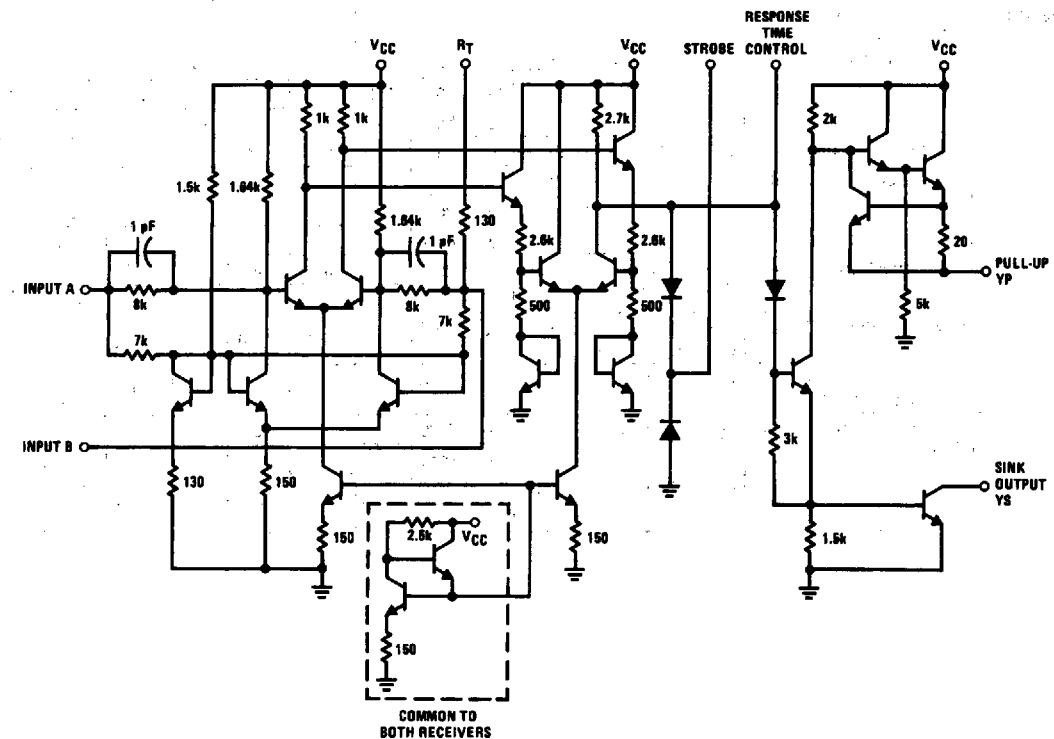

Note 4: Only one output at a time should be shorted.

Note 5: Unless otherwise noted, $V_{STROBE} = 2.4V$. All parameters with the exception of off-state open-collector output current are measured with the active pull-up connected to the sink output.

Switching Characteristics $V_{CC} = 5V$, $C_L = 30\text{ pF}$, $T_A = 25^\circ C$
