PRODUCT OVERVIEW

SAM8 PRODUCT FAMILY

Samsung's SAM8 family of 8-bit single-chip CMOS microcontrollers offers a fast and efficient CPU, a wide range of integrated peripherals, and various mask-programmable ROM sizes. Important CPU features include:

- Efficient register-oriented architecture
- Selectable CPU clock sources
- Idle and Stop power-down mode release by interrupt
- Built-in basic timer with watchdog function

A sophisticated interrupt structure recognizes up to eight interrupt levels. Each level can have one or more interrupt sources and vectors. Fast interrupt processing (within a minimum six CPU clocks) can be assigned to specific interrupt levels.

KS88C6108/C6116/P6116 MICROCONTROLLERS

The KS88C6108/C6116/P6116 single-chip 8-bit microcontroller is based on the powerful SAM8 CPU architecture. The internal register file is logically expanded to increase the on-chip register space. The KS88C6108/C6116/P6116 have 8/16 K bytes of on-chip program ROM.

Following Samsung's modular design approach, the following peripherals were integrated with the SAM8 core:

- Four programmable I/O ports (total 28 pins)
- One 8-bit basic timer for oscillation stabilization and watchdog functions
- One 8-bit general-purpose timer/counter with selectable clock sources
- One 8-bit counter with selectable clock sources, including Hsync or Csync input
- One 8-bit timer for interval mode
- PWM block with seven 8-bit PWM circuits
- Sync processor block (for Vsync and Hsync I/O, Csync input, and Clamp signal output)

- Multi master IIC-bus with DDC support.

The KS88C6108/C6116/P6116 are a versatile microcontroller that is ideal for use in multi-sync monitors or in general-purpose applications that require sophisticated timer/counter, PWM, sync signal processing, and multi-master IIC-bus support with DDC. It is available in a 42-pin SDIP or a 44-pin QFP package.
