No.2181A

LA5536N

Monolithic Linear IC

**COMPACT DC MOTOR SPEED CONTROLLER****Applications**

- Speed control of compact DC motor for cassette tape recorder, radio-cassette recorder, record player

**Features**

- 4-pin SEP package facilitating mounting
- On-chip stable voltage reference meeting the requirements for various motors
- Excellent stability in each characteristic against ambient temperature change
- On-chip protector against inverted connection of supply voltage
- Minimum number of external parts required
- On-chip kickback absorber

**Maximum Ratings at Ta=25°C**

Sample Application Circuit

The number of revolutions is calculated by using the equation shown below.

$$From \ I_m \cdot R_m + E_o = R_T \left( I_s + \frac{I_s + I_m}{K} \right) + V_{ref},$$

$$E_o = V_{ref} + R_T \left( 1 + \frac{1}{K} \right) I_s + \left( \frac{R_T}{K} - R_m \right) I_m,$$

Assuming  $K \cdot R_m = R_T,$

The number of revolutions is determined by

$$E_o = V_{ref} + R_T \left( 1 + \frac{1}{K} \right) I_s$$

Unless  $R_T(\max) < K \cdot R_m(\min)$  in the Application Circuit, the operation becomes unstable.
