Equivalent Circuit and Test Circuit

Sample Application Circuit

$$\text{From } I_m \cdot R_m + E_o = R_T (I_S + \frac{I_S + I_m}{K}) + V_{ref},$$

$$E_o = V_{ref} + R_T (1 + \frac{1}{K}) I_S + (\frac{R_T}{K} - R_m) I_m$$

$$\text{Assuming } K \cdot R_m = R_T,$$

The number of revolutions is determined by

$$E_o = V_{ref} + R_T (1 + \frac{1}{K}) I_S$$

Unless $R_T(\text{max}) < K \cdot R_m(\text{min})$
in the Sample Application Circuit,
the operation becomes unstable.
