## Multi-function, Multiple Voltage Power Supply

### OVERVIEW

The LA5603 is a multi-function, low dropout voltage, multiple voltage power supply for use in microcomputer controlled audio equipment such as CD players and minicomponent stereo systems.

The LA5603 features a 5.6 V, 0.5 A supply, a 7.5 V, 1.0 A supply and a -7.5 V, -1.0 A supply each with an on/off switch, a 4.8 V ( $I_{OA2} = 0.1$  A,  $I_{OA1} = 0$ ) supply with a reverse current prevention diode and a 5.6 V ( $I_{OA1} = 0.1$  A,  $I_{OA2} = 0$ ) supply enabling it to power both analog and digital components.

The LA5603 incorporates reset, mute and power-on functions for generating signals for the component(s) being powered and an adjustable startup delay function for controlling the sequence in which system components are powered up.

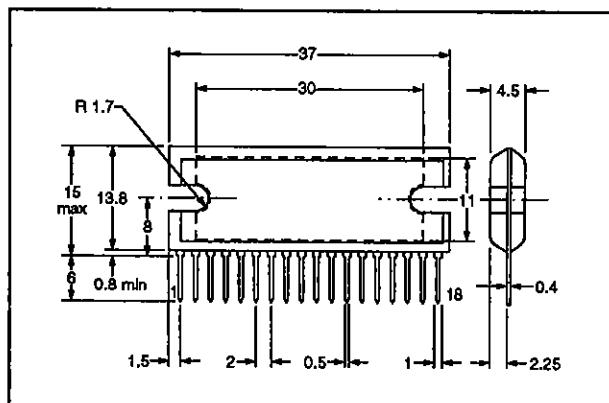

The LA5603 operates from a  $\pm 8.5$  to  $\pm 16$  V dual supply and is available in 18-pin SIPs.

## DESIGN NOTES

When the 5.6 ( $V_{01}$ ), 7.5 and -7.5 V outputs are ON, EN is high impedance.

When QUICK IN is HIGH, mute mode is ON. When QUICK IN is LOW, mute mode is OFF.

The output capacitors for  $V_{01}$ ,  $V_{0A1}$ , and  $V_{0A2}$  should be 47  $\mu\text{F}$  or greater. The output capacitors for  $V_{02}$  and  $V_{03}$

should be 100  $\mu\text{F}$  or greater. The output capacitors and  $C_d$ , the startup delay capacitor, should have good temperature stability to prevent oscillations at low temperatures.

Capacitors CN1, CN2, CN3 and CNA suppress noise and improve ripple rejection.
