## Single-Chip CTV Signal-Processing Circuit for PAL and NTSC Formats

### Overview

The LA7688 integrates VIF, SIF, video, chrominance, and deflection processing circuits for PAL/NTSC format TV sets on a single chip and is provided in a 52-pin shrink package.

The VIF and SIF circuits achieve semi-adjustment-free operation, and are adjustment-free except for the VCO coil and the RF AGC circuit. The chrominance circuit can be made adjustment-free by using the LC89950 1H delay line IC. All the signal processing required for a multi-format color TV can be implemented by combining this product with the LA7642 SECAM decoder IC.

### Features

- |          |                                                   |
|----------|---------------------------------------------------|
| [VIF]    | • PLL detector • Buzz canceller                   |
| [SIF]    | • PLL detector • Audio switch                     |
| [VIDEO]  | • Built-in trap • Built-in DL                     |
|          | • Aperture control                                |
|          | • Video switch (SVO output)                       |
|          | • Black expansion                                 |
| [CHROMA] | • PAL/NT • Base band processing (adjustment free) |
|          | • Built-in bandpass filter                        |
