

LH0020/LH0020C High Gain Operational Amplifier

General Description

The LH0020/LH0020C is a general purpose operational amplifier designed to source and sink 50 mA output currents. In addition to its high output capability, the LH0020/LH0020C exhibits excellent open loop gain, typically in excess of 100 dB. The parameters of the LH0020 are guaranteed over the temperature range of -55°C to $+125^{\circ}\text{C}$ and $\pm 5\text{V} \leq V_S \leq \pm 22\text{V}$, while those of the LH0020C are guaranteed over the temperature range of 0°C to $+85^{\circ}\text{C}$ and $\pm 5\text{V} \leq V_S \leq \pm 18\text{V}$.

Output current capability, excellent input characteristics, and large open loop gain make the LH0020/LH0020C suitable for application in a wide variety of applications from precision DC power supplies to precision medium power comparator.

Features

- Low offset voltage typically 1.0 mV at 25°C over the entire common-mode voltage range
- Low offset current typically 10 nA at 25°C for the LH0020 and 30 nA for the LH0020C
- Offset voltage is adjustable to zero with a single potentiometer
- $\pm 14\text{V}$, 50 mA output capability
