

LH0022/LH0022C High Performance FET Op Amp

LH0042/LH0042C Low Cost FET Op Amp

LH0052/LH0052C Precision FET Op Amp

General Description

The LH0022/LH0042/LH0052 are a family of FET input operational amplifiers with very closely matched input characteristics, very high input impedance, and ultra-low input currents with no compromise in noise, common mode rejection ratio, open loop gain, or slew rate. The internally laser nulled LH0052 offers 500 μ V maximum offset and 2 μ V/ $^{\circ}$ C offset drift. Input offset current is less than 500 femtoamps at room temperature and 500 pA maximum at 125 $^{\circ}$ C. The LH0022 and LH0042 are not internally nulled but offer comparable matching characteristics. All devices in the family are internally compensated and are free of latch-up and unusual oscillation problems. The devices may be offset nulled with a single 10k trimpot with negligible effect in CMRR.

The LH0022, LH0042 and LH0052 are specified for operation over the -55 $^{\circ}$ C to +125 $^{\circ}$ C military temperature range. The LH0022C, LH0042C and LH0052C are specified for operation over the -25 $^{\circ}$ C to +85 $^{\circ}$ C temperature range.

The LH0022/LH0042/LH0052 family of IC op amps are intended to fulfill a wide variety of applications for process control, medical instrumentation, and other systems requiring very low input currents and tightly matched input offsets. The LH0052 is particularly suited for long term high

accuracy integrators and high accuracy sample and hold buffer amplifiers. The LH0022 and LH0042 provide low cost high performance for such applications as electrometer and photocell amplification, pico-ammeters, and high input impedance buffers.

Special electrical parameter selection is available on special request.

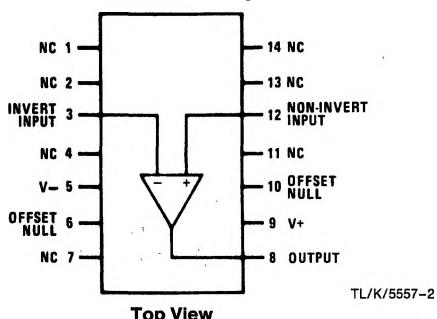

For additional application information and information on other National operational amplifiers, see *Available Linear Applications Literature*.

Features

- Low input offset current—500 femtoamps max (LH0052)
- Low input offset drift—2 μ V/ $^{\circ}$ C typ (LH0052)
- Low input offset voltage—100 μ V typ
- High open loop gain—100 dB typ
- Excellent slew rate—3.0 V/ μ s typ
- Internal 6 dB/octave frequency compensation
- Pin compatible with standard IC op amps (TO-5 package)

AC Electrical Characteristics for all amplifiers (T_A = 25°C, V_S = ±15V)

Parameter	Conditions	Limits						Units	
		LH0022/42/52			LH0022C/42C/52C				
		Min	Typ	Max	Min	Typ	Max		
Slew Rate	Voltage Follower	1.5	3.0		1.0	3.0		V/μs	
Large Signal Bandwidth	Voltage Follower		40			40		kHz	
Small Signal Bandwidth			1.0			1.0		MHz	
Rise Time			0.3	1.5		0.3	1.5	μs	
Overshoot			10	30		15	40	%	
Settling Time (0.1%)	ΔV _{IN} = 10V		4.5			4.5		μs	
Overload Recovery			4.0			4.0		μs	

AC Electrical Characteristics for all amplifiers ($T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{V}$) (Continued)

Parameter	Conditions	Limits						Units	
		LH0022/42/52			LH0022C/42C/52C				
		Min	Typ	Max	Min	Typ	Max		
Input Noise Voltage	$R_S = 10\text{k}\Omega$, $f_0 = 10\text{ Hz}$		150			150		$\text{nV}/\sqrt{\text{Hz}}$	
	$R_S = 10\text{k}\Omega$, $f_0 = 100\text{ Hz}$		55			55		$\text{nV}/\sqrt{\text{Hz}}$	
	$R_S = 10\text{k}\Omega$, $f_0 = 1\text{ kHz}$		35			35		$\text{nV}/\sqrt{\text{Hz}}$	
	$R_S = 10\text{k}\Omega$, $f_0 = 10\text{ kHz}$		30			30		$\text{nV}/\sqrt{\text{Hz}}$	
	BW = 10 Hz to 10kHz, $R_S = 10\text{k}\Omega$		12			12		μVRms	
Input Noise Current	BW = 10 Hz to 10kHz		<0.1			<0.1		pArms	

Note 1: For supply voltages less than $\pm 15\text{V}$, the absolute maximum input voltage is equal to the supply voltage.

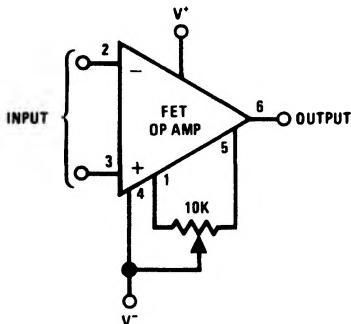

Note 2: Rating applies for minimum source resistance of $10\text{k}\Omega$, for source resistances less than $10\text{k}\Omega$, maximum differential input voltage is $\pm 5\text{V}$.

Note 3: Unless otherwise specified, these specifications apply for $\pm 5\text{V} \leq V_S \leq +20\text{V}$ and $-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$ for the LH0022/42/52 and $-25^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$ for the LH0022C/42C/52C. Typical values are given for $T_A = 25^\circ\text{C}$.

Note 4: Input currents are a strong function of temperature. Due to high speed testing they are specified at a junction temperature $T_J = 25^\circ\text{C}$. Self heating will cause an increase in current in manual tests. 25°C spec is guaranteed by testing at 125°C .
