

LT111A/LT311A
LM111/LM311

Voltage Comparator

FEATURES

- Guaranteed Max Input Offset Voltage 1.0mV
- Guaranteed Max Input Offset Current 5nA
- Guaranteed Max Response Time 250nS
- Guaranteed Min. Voltage Gain 200,000
- $\pm 30V$ Differential Input Voltage
- Drives 50mA Loads At Up To 50V.
- $\frac{1}{2}$ The Power Dissipation For LT111A/LT311A

DESCRIPTION

The LT111A is an improved version of the LM111 general purpose comparator. These new devices offer maximum input offset voltage of 1.0mV and input offset current of 5.0nA with a maximum response time of 250ns. The LT111A operates from a single 5V supply to $\pm 15V$ supplies and can drive up to 50mA loads referred to ground or either supply. A separate output ground pin allows output signals to be isolated from analog ground.

The versatility of the LT111A is enhanced by an input stage design which allows differential input signals of up to $\pm 30V$. Offset balancing, strobe capability and the ability to "OR" the output is also included. These features plus Linear Technology Corporation's advanced processing and reliability enhancements make the LT111A an ideal choice for most comparator applications. For higher performance requirements, see the LT1011. For operation up to 200°C, see LT111X data sheet.

6

APPLICATIONS

- General Purpose Comparator
- Zero Crossing Detector
- Voltage To Frequency Converter

Low Drift R/C Oscillator

Transfer Function

LT111A/LT311A LM111/LM311

ABSOLUTE MAXIMUM RATINGS

Supply Voltage (pin 8 to pin 4)	36V
Output to Negative Supply (pin 7 to pin 4)	
LT111A/LM111	50V
LT311A/LM311	40V
Ground to Negative Supply (pin 1 to pin 4)	30V
Differential Input Voltage	$\pm 30V$
Voltage at Strobe Pin (pin 6 to pin 8)	5V
Input Voltage (Note 1)	$\pm 15V$
Output Short Circuit Duration	10 sec.
Operating Temperature Range (Note 2)	
LT111A/LM111	-55°C to 125°C
LT311A/LM311	0°C to 70°C
Storage Temperature Range	-65°C to 150°C
Lead Temperature (Soldering, 10 sec.)	300°C

	Negative Supply Current			1.5	2.5	4.1	5.0	5.0	mA

The ● denotes the specifications which apply over the full operating temperature range.

Note 1: Applicable for $\pm 15V$ supplies. The positive input voltage limit is 30V above the negative supply. The negative input voltage limit is the negative supply.

Note 2: T_j max. = $150^\circ C$ for the LT111A and $95^\circ C$ for the LT311A.

Note 3: Offset voltage, offset current and bias current specifications apply for any supply voltage from a single 5V up to $\pm 15V$ supplies.

Note 4: Offset voltages and offset currents shown are the maximum values required to drive the output within a volt of either supply with a 1mA load. These parameters define an error band and take into account the worst case effects of voltage gain and input impedance.

Note 5: Response time is specified for a 100mV input step with 5mV overdrive with the collector output terminated with a 500Ω pullup resistor tied to 5V.

Note 6: Do not short the strobe pin to ground. It should be current driven at 3 to 5mA for the shortest strobe time. Currents as low as $500\mu A$ will strobe the LT111A if speed is not important. External leakage on the strobe pin in excess of $0.2\mu A$ when the strobe is "off" can cause offset voltage shifts.

Note 7: $R_L = 1k\Omega$, $-10V \leq V_{OUT} \leq 14.5V$
