LM161/LM261/LM361

High Speed Differential Comparators

General Description

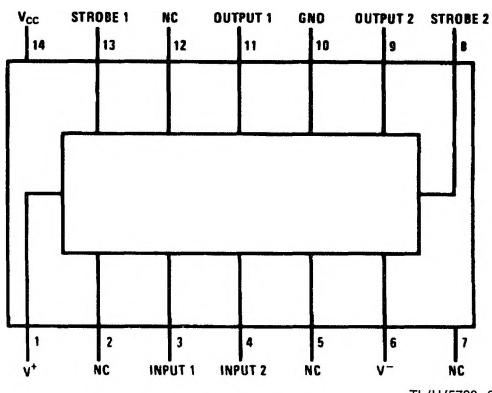

The LM161/LM261/LM361 is a very high speed differential input, complementary TTL output voltage comparator with improved characteristics over the SE529/NE529 for which it is a pin-for-pin replacement. The device has been optimized for greater speed performance and lower input offset voltage. Typically delay varies only 3 ns for over-drive variations of 5 mV to 500 mV. It may be operated from op amp supplies (± 15 V).

Complementary outputs having maximum skew are provided. Applications involve high speed analog to digital converters and zero-crossing detectors in disk file systems.

Features

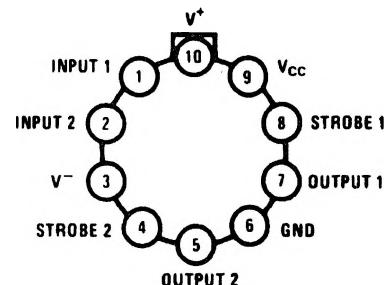

- Independent strobes
- Guaranteed high speed 20 ns max
- Tight delay matching on both outputs
- Complementary TTL outputs
- Operates from op amp supplies ± 15 V
- Low speed variation with overdrive variation
- Low input offset voltage
- Versatile supply voltage range

Transient Response	V _{IN} = 50 mV overdrive (Note 3)								
Propagation Delay Time (t _{pd(0)})	T _A = 25°C		14	20		14	20	ns	
Propagation Delay Time (t _{pd(1)})	T _A = 25°C		14	20		14	20	ns	
Delay Between Output A and B	T _A = 25°C		2	5		2	5	ns	
Strobe Delay Time (t _{pd(0)})	T _A = 25°C		8			8		ns	
Strobe Delay Time (t _{pd(1)})	T _A = 25°C		8			8		ns	

Note 1: The device may be damaged by use beyond the maximum ratings.

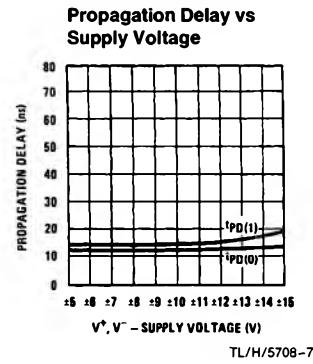

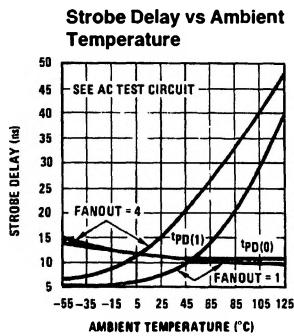

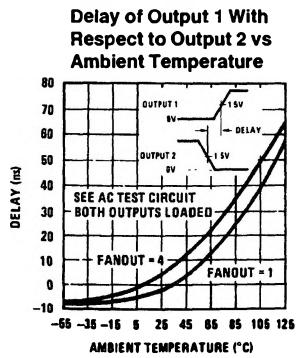

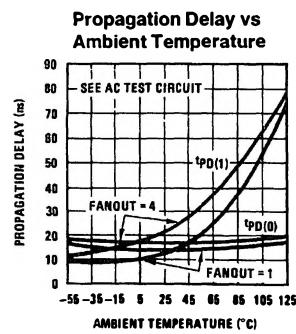

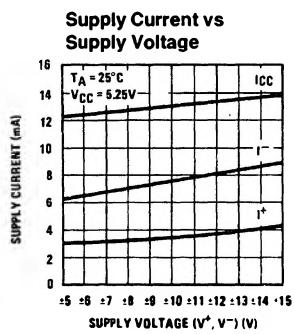

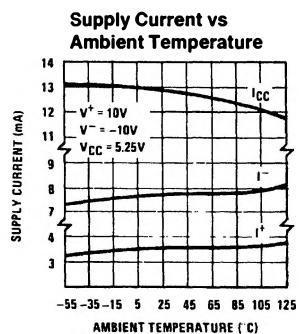

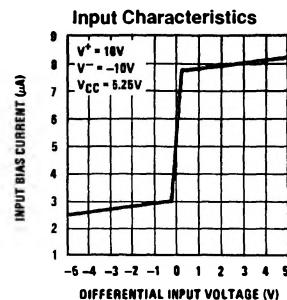

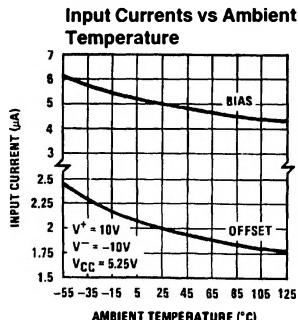

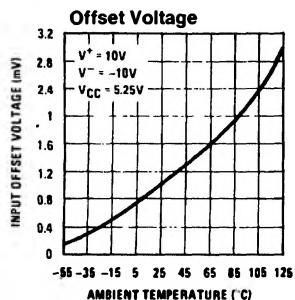

Note 2: Typical thermal impedances are as follows:

	H Package	J Package	N Package
θ_{JA}	165°C/W (Still Air) 67°C/W (400 LF/Min Air Flow)	112°C/W	105°C/W
θ_{JC}	25°C/W		

Note 3: Measurements using AC Test circuit, Fanout = 1. The devices are faster at low supply voltages.

Note 4: Refer to RETS161X for LM161H and LM161J military specifications.
