

LM320L 3-Terminal Negative Regulators

General Description

The LM320L series of 3-terminal negative voltage regulators features fixed output voltages of $-5V$, $-12V$, and $-15V$, with output current capabilities in excess of 100 mA . These devices were designed using the latest computer techniques for optimizing the packaged IC thermal/electrical performance. The LM320L series, even when combined with a minimum output compensation capacitor of $0.1\text{ }\mu\text{F}$, exhibits an excellent transient response, a maximum line regulation of $0.07\% \text{ } V_O/\text{V}$, and a maximum load regulation of $0.01\% \text{ } V_O/\text{mA}$.

The LM320L series also includes, as self-protection circuitry: safe operating area circuitry for output transistor power dissipation limiting, a temperature independent short circuit current limit for peak output current limiting, and a thermal shutdown circuit to prevent excessive junction temperature. Although designed primarily as fixed voltage regulators, these devices may be combined with simple external circuitry for boosted and/or adjustable voltages and currents. The LM320L series is available in the 3-lead TO-92 package.

For output voltages other than $-5V$, $-12V$ and $-15V$, the LM137 and LM137HV series provide an output voltage range from $-1.2V$ to $-47V$.

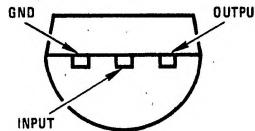

Features

- Preset output voltage error is less than $\pm 5\%$ over load, line and temperature
- LM320L is specified at an output current of 100 mA
- Internal short-circuit, thermal and safe operating area protection
- Easily adjustable to higher output voltages
- Maximum line regulation less than $0.07\% \text{ } V_{\text{OUT}}/\text{V}$
- Maximum load regulation less than $0.01\% \text{ } V_{\text{OUT}}/\text{mA}$
- Easily compensated with a small $0.1\text{ }\mu\text{F}$ output capacitor

Note 1: Thermal resistance of Z package is typically 60°C/W θ_{JC}, 232°C/W θ_{JA} at still air, and 88°C/W at 400 ft/min of air. The maximum junction temperature shall not exceed 125°C on electrical parameters.

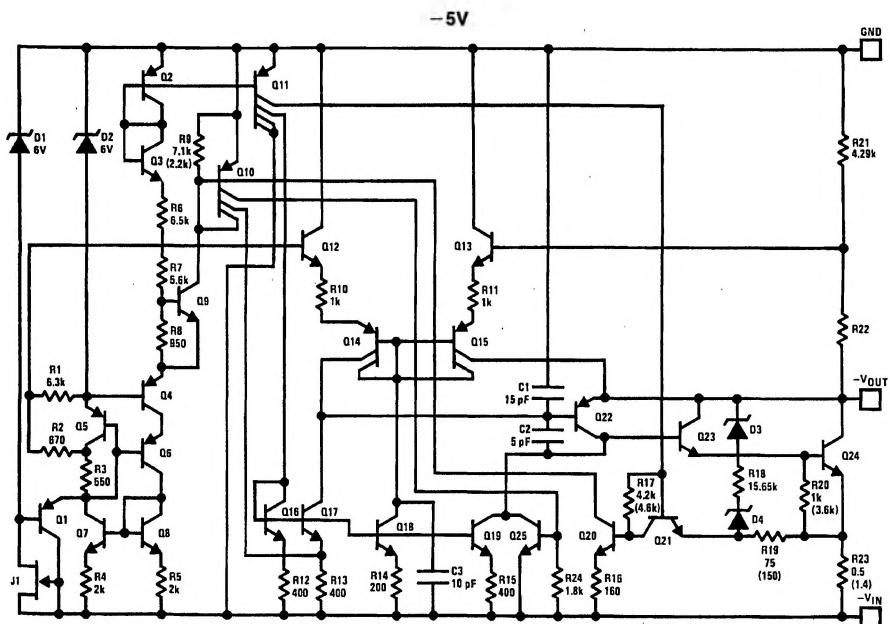

Note 2: To ensure constant junction temperature pulse testing is used.
