LM8335 General Purpose Output Expander with MIPI® RFFE Host Interface

Check for Samples: LM8335

FEATURES

- **MIPI RFFE Interface Version 1.10 Compliant**
- **Supports Output Expansion**
- **Host Interface Address Select Pin:**
  - **ADR=GND, USID[3:0]=0001**
  - **ADR=VDD, USID[3:0]=1001**
- **Pin-Configurable Initial State: VIO**
  - **CFG=GND, GPO High-z, with Weak Internal Pull-Down Resistor Enabled; GPO_OUT_DATA is Unmasked**
  - **CFG=VDD, GPO High-z, with Weak Internal Pull-Down Resistor Enabled; GPO_OUT_DATA is Masked**
- **Three Sources for Chip Reset:**
  - **VIO Input Pin**
  - **POR**
  - **Software-Commanded Reset**

APPLICATIONS:

- **Smart Handheld Devices**
- **RF Transceiver Applications**

KEY SPECIFICATIONS

- **1.8 ± 0.15V MIPI RFFE Operation (VIO)**
- **1.8 ± 0.15V Core Supply (V_{DD})**
- **1.65 to 3.6V GPO Supply (V_{DDIO})**
- **Low Standby and Active Current**
- **On-Chip Power-On Reset (POR)**
- **−30 to +85°C Ambient Temperature Range**
- **16-Bump DSBGA Package**
  - **1.965 mm x 1.965 mm x 0.6 mm, 0.5 mm Pitch (Nominal)**

DESCRIPTION

The LM8335 General Purpose Output Expander is a dedicated device to provide flexible and general purpose, host programmable output expansion functions. This device communicates with a host processor through a MIPI® RFFE Interface (Mobile Industry Processor Interface RF Front-End).

Eight general purpose outputs (GPO) can be configured by the host controller as drive high/low/high-z. Weak pull-ups (PU) or weak pull-downs (PD) can be enabled.

Upon power-on, the LM8335 default configuration is for all GPO to be set based on the state of the CFG pin.

After startup, any changes to the default configuration must be sent from the host via the MIPI RFFE host interface..

The LM8335 is available in a 16-bump lead-free DSBGA package of size 1.965 mm x 1.965 mm x 0.6 mm (0.5 mm pitch).

PIN DESCRIPTIONS

Pin Number	Name	Description
8	GPO_0 through GPO_7	General purpose outputs
1	SCLK	RFFE clock input
1	SDATA	RFFE data input
1	ADR	RFFE chip address input
		ADR = VDD: USID[3:0] = b1001
		ADR = GND: USID[3:0] = b0001
1	CFG	Initial configuration select
		CFG = VDD: GPO high-z with weak internal pull-down resistor enabled, GPO_OUT_DATA masked
		CFG = GND: GPO high-z, with weak internal pull-down resistor enabled, GPO_OUT_DATA unmasked
1	VIO	MIPI RFFE VIO (1.8V ± 0.15V)
1	VDD	Core supply VDD (1.8V ± 0.15V)
1	VDDIO	GPO supply VDDIO (1.65V to 3.6V)
1	GND	Ground

PRODUCT PREVIEW

ADR INPUT PIN

The state of the ADR pin determines the MIPI RFFE USID as described in the table above. This enables two devices to be used on the same RFFE bus thereby doubling the number of GPOs available in the system (see Dual RFFE Slave Application Block Diagram).

DEFAULT GPO_x PIN CONFIGURATION

Upon power-on all GPOs will default based on the state of the CFG pin.

CFG INPUT PIN = GND

The CFG0 mode is an automatic initialization mode. It allows the host to not have to first configure any registers before writing the GPO_OUT_DATA register to set the GPOs high or low. In this mode, the GPOs will default as high-z with weak pull-down resistors enabled and the GPO_OUT_DATA will be unmasked. When the host writes the GPO_OUT_DATA register, the weak pull-down resistor will be disabled. The output driver will immediately be enabled and will drive high or low based on the value written to the GPO_OUT_DATA register. In configuration mode CFG0 the GPO data mask function is available but the GPO pull resistor, and high-z functions cannot be changed. Writing to the GPO_PULL_DIR, GPO_PULL_ENABLE, and GPO_OUT_HIGH_CFG registers will have no effect. If control of the GPO pull resistor or output configuration is required then the CFG1 mode must be used.

CFG INPUT PIN = VDD

The CFG1 mode is a more general purpose mode where the outputs must be configured during initialization prior to use. In this mode, the GPOs will default as high-z with internal pull-down resistors enabled and GPO_OUT_DATA will be masked. During initialization, the host must first write to the GPO_OUT_DATA register (Note: this will transition all of the GPOs from high-z with internal pull-down to Full-Buffer driven low with internal pull-down regardless of the value written to the GPO_OUT_DATA register). The host must then write to the GPO_PULL_DIR, GPO_PULL_ENABLE, & GPO_OUT_HIGH_CFG registers to configure each GPO into the desired output configuration. Once that is complete, the host then writes the GPO_DATA_MASK and GPO_OUT_DATA registers to set the GPO outputs in the desired state. Refer to Figure 8.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings (1)(2)

RFFE Supply Voltage (VIO)	−0.3V to 2.2V
Core Supply Voltage (VDD)	−0.3V to 2.2V
GPO Supply Voltage (VDDIO)	−0.3V to 4.0V
DC Input Voltage for SCLK & SDATA pins	−0.3V to (VIO+0.3V)
DC Input Voltage for ADR & CFG pins	−0.3V to (V_{DD}+0.3V)
DC Output Voltage for GPO pins	−0.3V to (V_{DDIO}+0.3V)
Storage Temperature Range	−40°C to +125° C
Operating Ambient Temperature (TA)	−0°C to +85°C
Lead Temperature (TL) (Soldering, 10 sec.)	260°C
ESD Rating (CZAP=120 pF, RZAP=1500Ω)	
Human Body Model (3)	1000V
Charge Device Model:	250V

(1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not specified. For specifications and test conditions, see the Electrical Characteristics tables.
(2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
(3) The human body model is a 100 pF capacitor discharged through a 1.5 kΩ resistor into each pin. The machine model is a 200 pF capacitor discharged directly into each pin.

PRODUCT PREVIEW

Operating Ratings

	Min	Max	Unit
RFFE Supply Voltage (VIO)	1.65	1.95	V
RFFE Supply Noise (VIO)		25	mVpp
Core Supply Voltage (V_{DD})	1.65	1.95	V
Core Supply Noise (V_{DD})		25	mVpp
GPO Supply Voltage (V_{DDIO})	1.65	3.60	V
GPO Supply Noise (V_{DDIO})		50	mVpp

DC Electrical Characteristics: General (ADR, CFG)(1)(2)

T_A: −30°C to +85°C, VIO = 1.8V ± 0.15V, V_{DD} = 1.8V ± 0.15V, V_{DDIO} = 3.3V ± 0.3V (unless otherwise specified).

Symbol	Parameter	Conditions	Min	Typ	Max	Units
V_{IH}	Minimim high-level input voltage (ADR, CFG)		0.7 * V_{DD}		V_{DD}+ 0.2	V
V_{IL}	Maximum low-level input voltage (ADR, CFG)		−0.2		0.3 * V_{DD}

PRODUCT PREVIEW

MIPI RFFE INTERFACE

The LM8335 provides RFFE compatible slave access to the device specific and RFFE defined registers on a single master bidirectional serial bus interface. The LM8335 uses the three interface signals SCLK, SDATA, and VIO as defined in MIPI RFFE Version 1.10 – 26 July 2011. The VIO voltage supply provides power to the LM8335 RFFE Interface and doubles as an asynchronous enable and reset. Whenever VIO is low the SCLK and SDATA lines must be held low. When the VIO voltage is applied, the LM8335 enables the slave interface and resets the user defined slave registers to the default settings. The LM8335 enters the power down mode via the asynchronous VIO signal. The LM8335 does not support read access.

The LM8335 contains fewer than 28 user defined registers but supports the Extended Register Write Command to allow a burst write of configuration registers during initialization. Any write outside of the range from 0x00 to 0x1F will have no effect on device operation.

The LM8335 recognizes the broadcast Slave Identifier (SID) of 0000b and is configured internally with a Unique Slave Identifier (USID) and a Group Slave Identifier (GSID). The USID is set based on the state of the ADR pin and the GSID is set to 0000b. The USID may be reprogrammed via the RFFE Interface by performing the Register Write USID Command Sequence.

The LM8335 supports only the 1.8V VIO supply levels. The LM8335 utilizes a power-detect reset circuit that resets the RFFE interface and internal registers when VIO is removed.

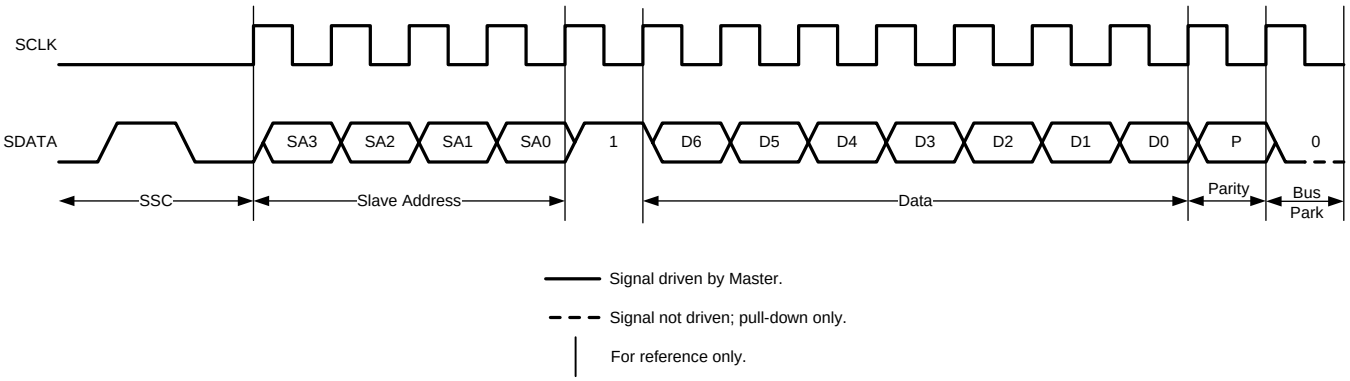

Figure 4. Register 0 Write Command Sequence

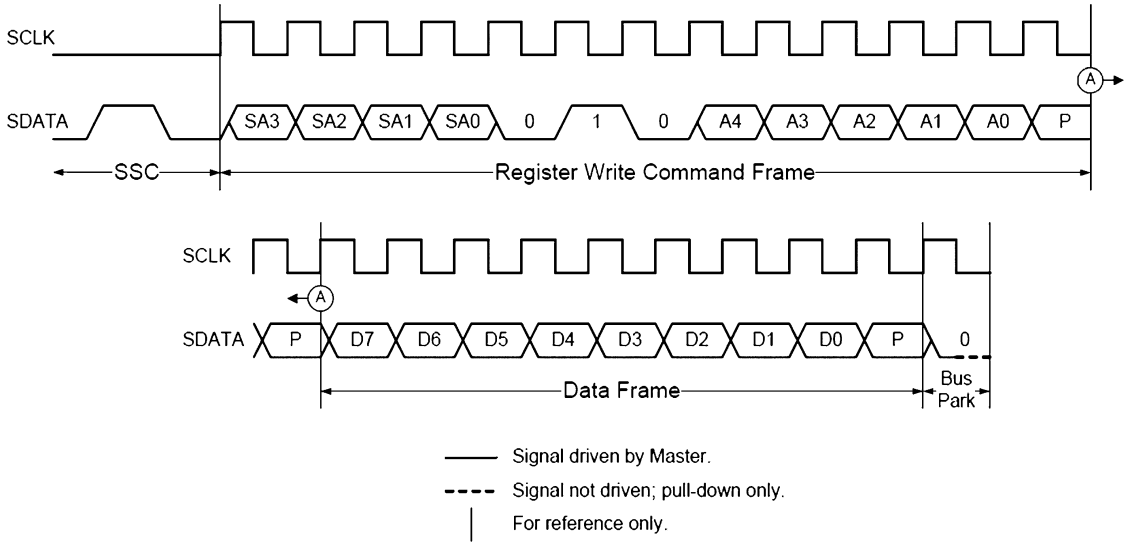

Figure 5. Register Write Command Sequence

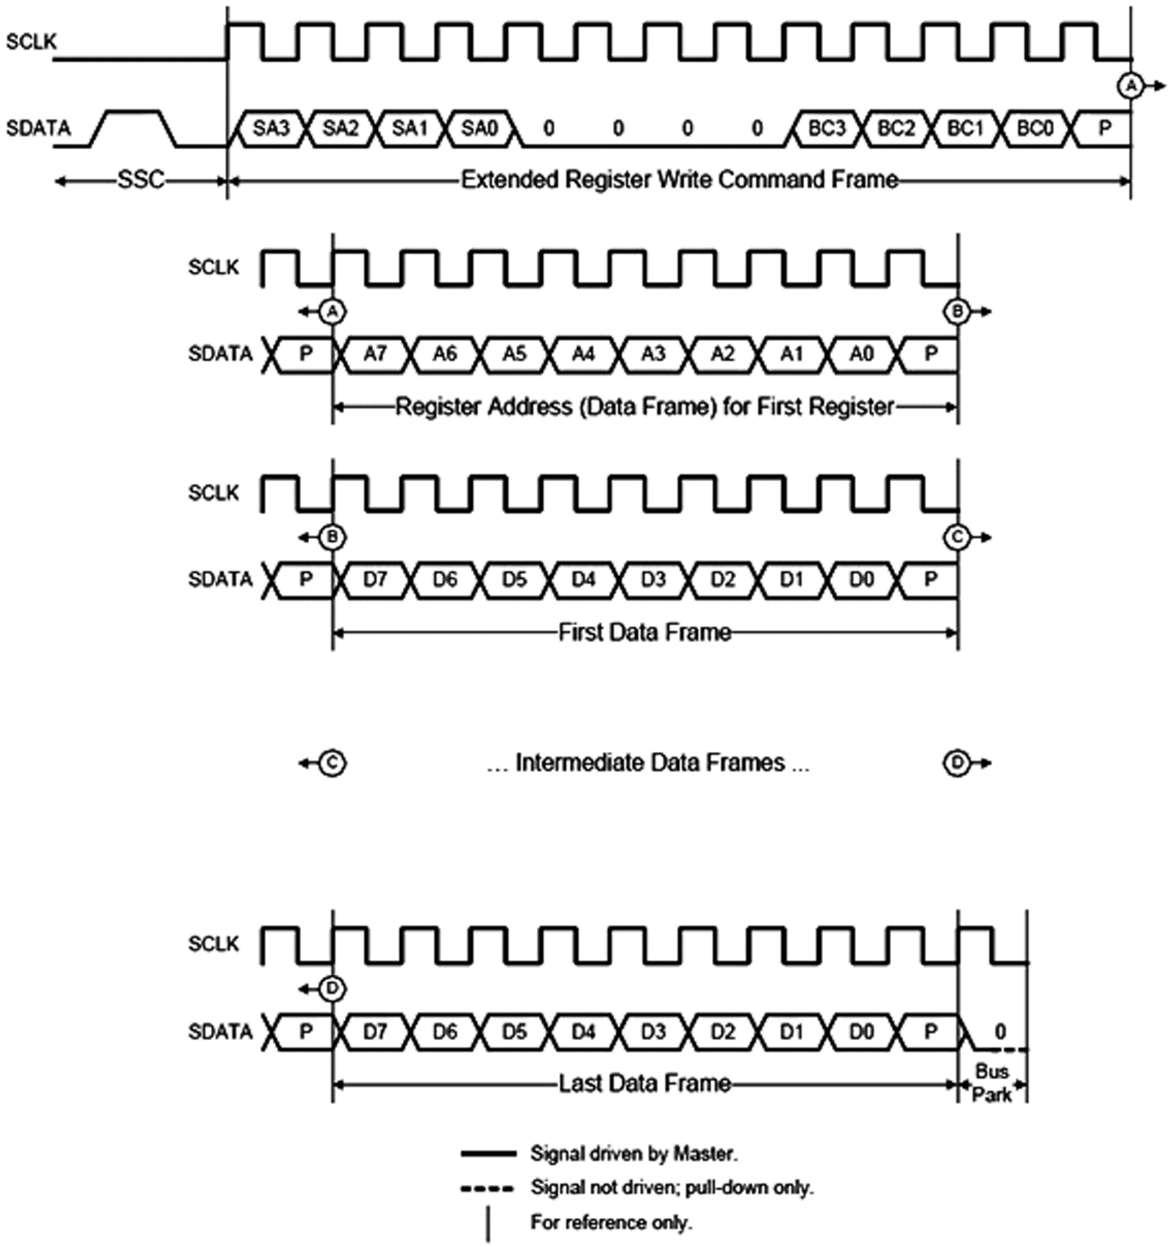

Figure 6. Extended Register Write Command Sequence

INTERNAL POR OPERATION

There are two internal POR circuits: one on the VDD supply and one on the VDDIO supply that initialize the LM8335 when power is applied. The duration of the reset is an RC delay which is based on the ramp rate and not a threshold voltage of the VDD/VDDIO supply. VIO can be activated as soon as VDD and VDDIO have reached their minimum respective voltage levels however the LM8335 may still be in reset due to the internal POR timing. When VIO is asserted after VDD and VDDIO t_{PORC} Max, the device reset will be released based on the VIO t_{READY} timing.

Register Information

Table 1. Register Listing

Register Name	Addr	Bit	Default	Description
CNTL_REG	0x00	7:0	0x00	Software reset register Bit 0 = 0, no effect Bit 0 = 1, reset registers to default values (self-clearing)
GPO_PULL_DIR	0x01	7:0	0x00	GPO pin pull resistor direction 0 = pull-down 1 = pull-up Note: When CFG = GND, writing to this register has no effect. The pull-down resistor will be disabled after the first write to the GPO_OUT_DATA register.
GPO_PULL_ENABLE	0x02	0xFF	0xFF	GPO pin internal pull resistor enable 0 = disabled 1 = enabled Note: GPO_PULL_DIR register selects if the resistor is a pull-up or a pull-down. When CFG = GND, writing to this register has no effect. The pull-down resistor will be disabled after the first write to the GPO_OUT_DATA register.
GPO_OUT_HIGH_CFG	0x03	7:0	0xFF	GPO output high state (full buffer or high-z). 0 = full buffer 1 = high-z (open-drain behavior) Note: When CFG = GND, writing to this register has no effect. The pull-down resistor will be disabled, and all GPO outputs will be in the actively driven state (not high-z) after the first write to the GPO_OUT_DATA register.

Table 1. Register Listing (continued)

Register Name	Addr	Bit	Default	Description
GPO_OUT_MASK	0x04	7:0	0xFF (CFG=0) or 0x00 (CFG=1)	GPO output data mask 0 = GPO_OUT_DATA masked 1 = GPO_OUT_DATA unmasked Note: Only the GPO_OUT_DATA register write is affected by the GPO_OUT_MASK register. When the GPO_OUT_MASK bit is set low (masked), writing to GPO_OUT_DATA register will leave the pin state unchanged. When the GPO_OUT_MASK bit is set high (unmasked), the GPO output will be updated when the GPO_OUT_DATA is written (only GPOs that are unmasked will be changed).
GPO_OUT_DATA	0x05	7:0	0x00	GPO output data 0 = pin set low 1 = pin set high Note: GPO_OUT_HIGH_CFG register selects if the pin is driven or high-z. The pin state will follow GPO_OUT_DATA only if the corresponding bit is unmasked in the GPO_OUT_MASK register.
PM_TRIG	0x1C	7:0	0x00	MIPI RFFE power mode and trigger register Bits 7:6 = PWR_MODE Bits 5:0 = TRIG_REG
PROD_ID	0x1D	7:0	0xC4	This is a MIPI RFFE reserved read only register and can not be read since readback is not supported on this device. Bits 7:0 = PRODUCT_ID [7:0] The product ID is provided as information only to support the RFFE USID programming feature.
MAN_ID	0x1E	7:0	0x02	This is a MIPI RFFE reserved read-only register and can not be read since readback is not supported on this device. Bits 7:0 = MANUFACTURER_ID [7:0] The manufacturer ID is provided as information only to support the RFFE USID programming feature.
USID_REG	0x1F	7:0	0x11 (ADR=0) or 0x19 (ADR=1)	This MIPI RFFE reserved register Bits 7:6 = SPARE Bits 5:4 = MANUFACTURER_ID [9:8] = 1 Bits 3:0 = Programmable Unique Slave Identifier — ADR=Low, USID[3:0]=0001 — ADR=High, USID[3:0]=1001 Note: The USID is initially set based on the state of the ADR pin (default value when ADR=Low shown). This register can not be read since readback is not supported on this device. USID_REG[5:4] are provided as information only to support the RFFE USID programming feature.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Top-Side Markings (4)	Samples
LM8335TLE/NOPB	ACTIVE	DSBGA	YZR	16	250	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM		8335	Samples
LM8335TLX/NOPB	ACTIVE	DSBGA	YZR	16	3000	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM		8335	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Only one of markings shown within the brackets will appear on the physical device.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
