LV0223CV — Monolithic Linear IC For Optical Pickups Front Monitor OE-IC

Overview

The LV0223CV is a front monitor optoelectronic IC for optical pickups that has a built-in photo diode compatible with three waveforms. LV0223CV is small size and type CSP packages.

Functions

- PIN photodiode compatible with three wavelengths incorporated.
- Gain adjustment (-6dB to +6dB in 256 steps) through serial communication.
- Amplifier to amplify differential output.

Specifications

Maximum Ratings at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{CC}		6	V
Allowable power dissipation	P_d	Glass epoxy both-side substrate 55mm × 45mm × 1.6mm Copper foil area (head: about 90% Tail: about 90%), $T_a=75^\circ\text{C}$	143	mW
Operating temperature	T_{opr}		-20 to +75	$^\circ\text{C}$
Storage temperature	T_{stg}		-40 to +100	$^\circ\text{C}$

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

Item with *1 mark indicate the design reference value.

Item with *2 mark indicate the frequency characteristics when VOP and VON are applied individually.

The frequency characteristics are for the output voltage adjustment range is -6 to +6dB

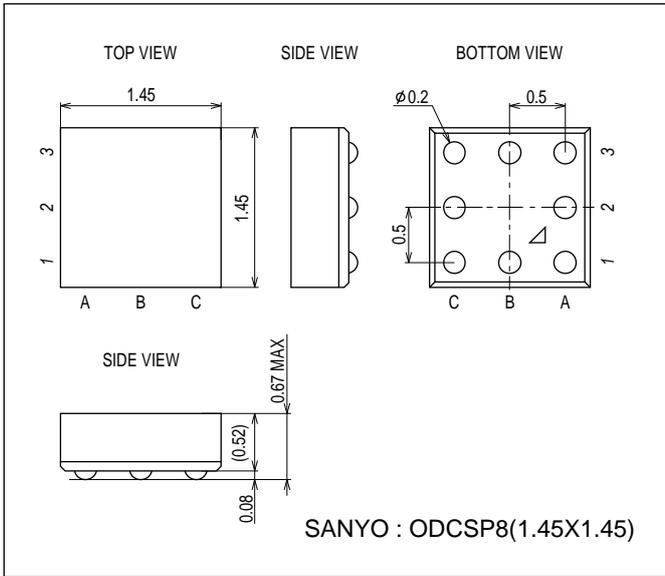

Item with *3 mark indicates the temperature dependence for the case of High2 / High1 / Middle2 / Middle1 / Low gain and for the case when the temperature is 25 to 75°C for the output voltage adjustment range of -6 to +6dB

[Expression of output voltage]

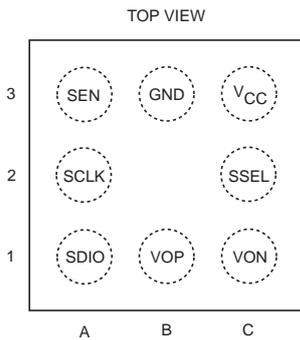

$$V_N = (\text{sensitivity} / 2) \times 5400 / (5400 - 16 \times \text{GCStep}) \times \text{light intensity} (\mu\text{W})$$

*1 TEST1 and TEST2 are either the time when power is applied or "00000000" is set. Do not attempt to change "00000000" during operation. "00000000" is returned when reading is made.

*2 No problem in terms of operation occurs even when writing is made to the address 04h to 0Dh and 14h to 1Dh and 74h to 7Dh. "00000000" is returned when this address is read.

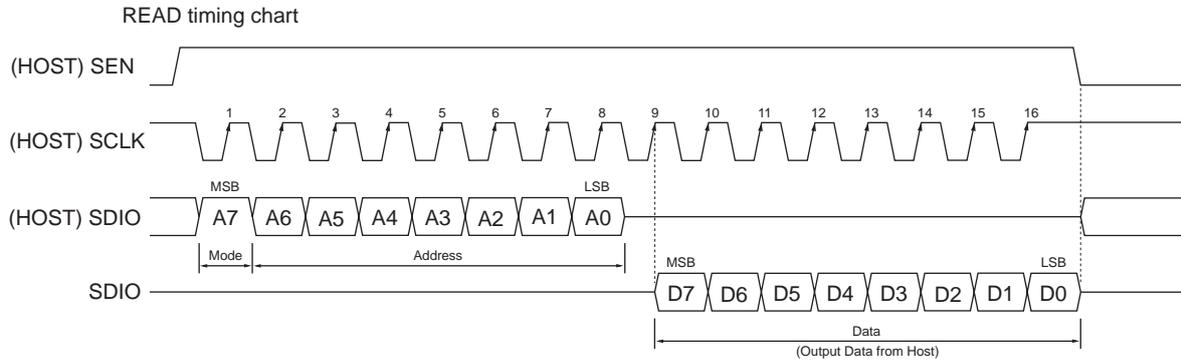

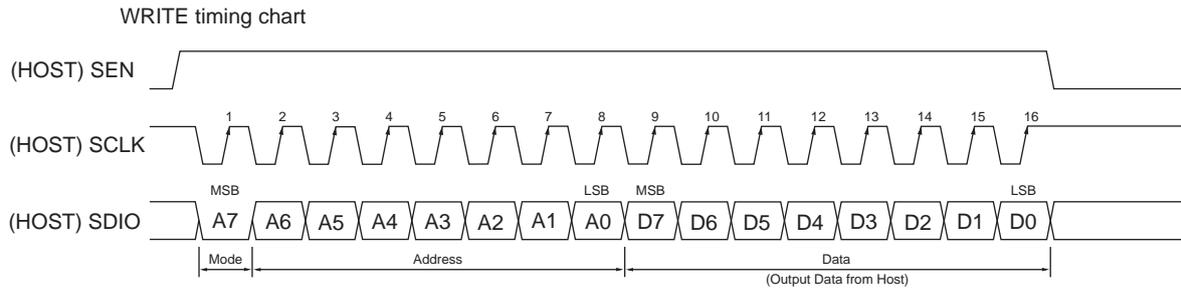

*3 When I performed address reading except the register group set by an SSEL terminal, I keep Hi-Z without paying a value.

*4 Please set the gain setting of the I/V amplifier referring to the table below.
