Bi-CMOS LSI

## **For Car Audio Systems Electronic Volume IC**

**CCB LV3313PM**

### **Overview**

The LV3313PM is an electronic volume IC that implements a rich set of audio control functions including input selection switching function, an input gain, volume, loudness, balance, fader, and bass/treble control.

### **Features**

- Zero-cross switching circuits (Input gain control block and Volume control block) can switch signal detection location automatically.
- Zero-cross switching circuits (Input gain control block and Volume control block) and soft mute circuits used for low noise even when input signals are present.
- Low power consumption due to the use of BiMOS process.
- All functions are controlled using serial data (CCB).

### **Functions**

- Input selector :  
Four input signals can be selected (three single-ended inputs and one differential input).
- Input gain control :  
The input signal can be amplified by 0dB to +18dB (1dB steps).
- Loudness control :  
Taps are output starting at the -32dB position of the ladder resistor and a loudness function implemented with external capacitor and resistor components.
- Volume control : +10dB to -79dB/-∞ (1dB steps)  
L/R independent control.
- Bass control : +12dB to -12dB in 2dB steps
- Treble control : +12dB to -12dB in 2dB steps
- Fader control :  
The fader volume can be attenuations by one of 16 levels. Independent control each four channels. (A total of 16 settings with attenuations of 0dB to -2dB in 1dB steps, -2dB to -20dB in 2dB steps, and -30dB, -45dB, -60dB and -∞dB settings.)
- Mute

- CCB is a registered trademark of SANYO Electric Co., Ltd.
- CCB is SANYO Semiconductor's original bus format. All bus addresses are managed by SANYO Semiconductor for this format.

- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.
- Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

**SANYO Semiconductor Co., Ltd.**

## Specifications

### Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$ , $V_{SS} = 0\text{V}$

Parameter	Symbol	Conditions	Ratings		Unit
Maximum supply voltage	$V_{DD}$ max	$V_{DD}$	9.5		V
Maximum input voltage	$V_{IN}$ max	All input pins	$V_{SS}-0.3$ to $V_{DD}$		V
Allowable power dissipation	$P_d$ max	$T_a \leq 85^\circ\text{C}$ , when mounted on a printed circuit board *	600		mW
Operating temperature	$T_{opr}$		-40 to +85		°C
Storage temperature	$T_{stg}$		-50 to +125		°C

\* Specified circuit board :  $114.3 \times 76.1 \times 1.6\text{mm}^3$  : glass epoxy board

### Allowable Operating Ratings at $T_a = 25^\circ\text{C}$ , $V_{SS} = 0\text{V}$

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Supply voltage	$V_{DD}$	$V_{DD}$	7.0	8.0	9.0	V
High-level input voltage	$V_{IH}$	CL, DI, CE	3.0		5.5	V
Low-level input voltage	$V_{IL}$	CL, DI, CE	$V_{SS}$		1.0	V
Input voltage amplitude	$V_{IN}$		$V_{SS}$		$V_{DD}$	Vp-p
Input pulse width	$T_{\phi W}$	CL	1			μs
Setup time	$T_{setup}$	CL, DI, CE	1			μs
Hold time	$T_{hold}$	CL, DI, CE	1			μs
Operating frequency	fopg	CL			500	kHz
Rising time	tr	CL, DI, CE			0.1/fopg	s
Falling time	tf					

### Electrical Characteristics at $T_a = 25^\circ\text{C}$ , $V_{DD} = 8\text{V}$ , $V_{SS} = 0\text{V}$

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
<b>Input block</b>						
Input resistance	$R_{in}$	L1-L3, R1-R3	35	50	65	kΩ
Minimum input gain	$G_{in}$ min	L1-L3, R1-R3	-1.0	0	+1.0	dB
Maximum input gain	$G_i$ max		+17	+18	+19	dB
Inter-step setting error	ATerr		-1.0		+1.0	dB
Left/Right balance	BAL		-0.5		+0.5	dB
<b>Volume block</b>						
Input resistance	$R_{vr}$	LVRIN, RVRIN	35	50	65	kΩ
Inter-step setting error	ATerr	+10dB to -40dB	-0.5		+0.5	dB
Left/Right balance	BAL		-0.5		+0.5	dB
<b>Bass block</b>

## Pin Assignment

## Block Diagram

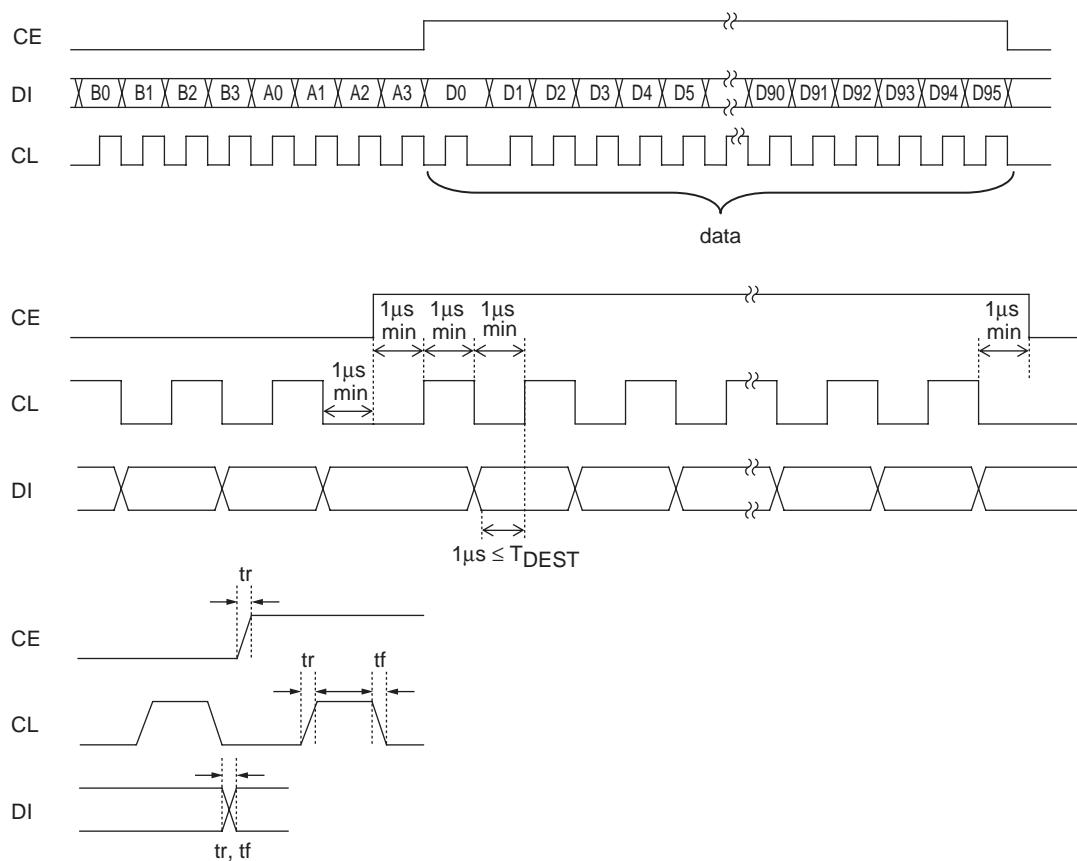

## Application Circuit

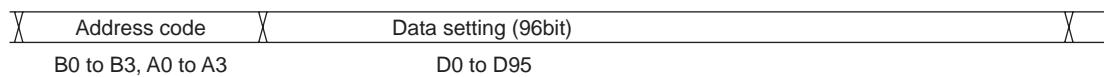

## Control System Timing and Data Format

The LV3313PM is controlled by applying the stipulated data to the CL, DI and CE pins. The data consists of a total of 104 bits, of which 8 bits are the device address, 96 bits are the control data.

# LV3313PM

Continued from preceding page.

Pin No.	Pin name	Function	Equivalent Circuit
41	Vref	Connect a capacitor of a few tens of $\mu\text{F}$ between Vref and AVSS ( $V_{SS}$ ) as a $0.55 \times V_{DD}$ voltage generator, current ripple countermeasure.	
15	VREG	Internal logic voltage pin.	
37	VDD	Power supply pin.	
20	AVSS	Ground pin.	
38	MUTE	External muting control pin. Setting this pin to $V_{SS}$ level sets forcibly fader volume block to $-\infty$ level.	
27 26 25 7 8 9	LF1C1 LF1C2 LF1C3 RF1C1 RF1C2 RF1C3	Capacitor connection pins for configuring equalizer bass band filter. Connect a capacitor between LF1C1 (RF1C1) and LF1C2 (RF1C2), and between LF1C2 (RF1C2) and LF1C3 (RF1C3).	
28 6	LF3C1 RF3C1	Capacitor connection pins for configuring equalizer treble band filter. Connect a high band compensation capacitor between LF3C1 (RF3C1) and VSS.	
17 18	CL DI	Input pin for serial data and clock used for control.	
19	CE	Chip enable pin. Data is written to the internal latch and the analog switches are operated when the level changes from High to Low. Data transfer is enabled when the level is High.	

Continued on next page.

# LV3313PM

Continued from preceding page.

Pin No.	Pin name	Function	Equivalent Circuit
39	TEST	IC test pin. Normally this pin is OPEN.	
14	DV <sub>SS</sub>	Logic system ground pin.	
16	OSC	External oscillat input pin. Normally this pin is OPEN.	
40	PH	Automatic zero cross detection pin.	

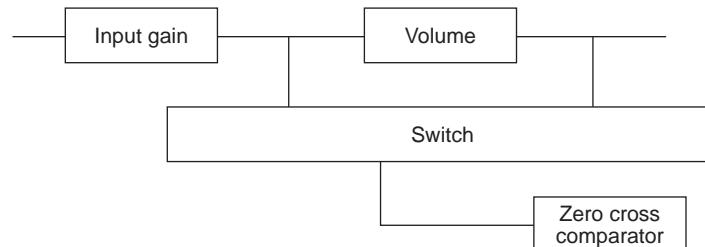

## Usage Cautions

### (1) Data Transmission at power on

- The status of internal analog switches is unstable at power on. Therefore, perform muting or some other countermeasure until the data has been set.
- At power on, initial setting data must be sent once in order to stabilize the bias of each block in a short time.

### (2) Description of zero cross switching circuit operation

The LV3313PM have a function to switch zero cross comparator signal detection locations, enabling the selection of the optimum detection location for blocks whose data is to be updated. Basically, the switching noise can be minimized by inputting the signal immediately following the block whose data is to be updated to the zero cross comparator, so it is necessary to switch the detection location every time.

LV3313PM zero cross detection circuit

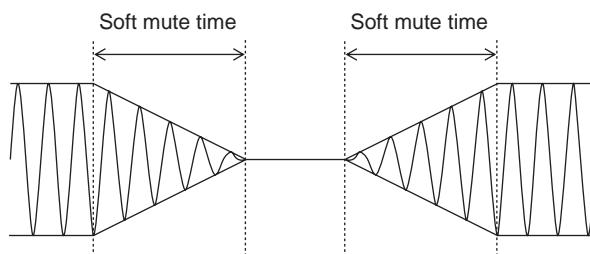

### (3) Zero Cross Switching Control method

The zero cross switching control method consists of setting the zero cross control bits to the zero cross detection mode, and specifying the detection blocks before transmitting the data. These control bits are latched immediately following data transfer, that is to say beforehand in sync with the falling edge of CE, so when updating data of volumes, etc., it is possible to perform mode setting and zero cross switching with one data transfer.

### (4) Soft mute operation

The LV3313PM have a soft mute function for low switching noise, when this mute function set operation.  
(mute/unmute function select)

The Soft mute time can be selected by send to CCB control. (0.6ms, 5ms, 40ms, 80ms)  
A soft mute function can be implemented by set to soft mute on. (Set to mute on/off)

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.

This catalog provides information as of July, 2008. Specifications and information herein are subject to change without notice.
