1.0 Introduction

This manual describes the functional, mechanical and interface specifications for the following DiamondMax[®] 21 Serial ATA model drives:

| | | | |
|--------------|--------------|--------------|-------------|
| STM3500630AS | STM3250824AS | STM3160815AS | STM380815AS |
| STM3320620AS | STM3250820AS | STM3160215AS | STM380215AS |
| STM3320820AS | STM3250310AS | | STM340215AS |

These drives provide the following key features:

- 7,200 RPM spindle speed.
- High instantaneous (burst) data-transfer rates (up to 300 Mbytes per second).
- Perpendicular recording, Tunneling Magnetoresistive (TMR) recording heads and EPRML technology, for increased areal density.
- State-of-the-art cache and on-the-fly error-correction algorithms.
- Native Command Queuing with command ordering to increase performance in demanding applications.
- Full-track multiple-sector transfer capability without local processor intervention.
- Quiet operation.
- SeaTools diagnostic software performs a drive self-test that eliminates unnecessary drive returns.
- Support for S.M.A.R.T. drive monitoring and reporting.
- Supports latching SATA cables and connectors.

1.1 About the Serial ATA interface

The Serial ATA interface provides several advantages over the traditional (parallel) ATA interface. The primary advantages include:

- Easy installation and configuration with true plug-and-play connectivity. It is not necessary to set any jumpers or other configuration options.
- Thinner and more flexible cabling for improved enclosure airflow and ease of installation.
- Scalability to higher performance levels.

In addition, Serial ATA makes the transition from parallel ATA easy by providing legacy software support. Serial ATA was designed to allow you to install a Serial ATA host adapter and Serial ATA disc drive in your current system and expect all of your existing applications to work as normal.

The Serial ATA interface connects each disc drive in a point-to-point configuration with the Serial ATA host adapter. There is no master/slave relationship with Serial ATA devices like there is with parallel ATA. If two drives are attached on one Serial ATA host adapter, the host operating system views the two devices as if they were both “masters” on two separate ports. This essentially means both drives behave as if they are Device 0 (master) devices.

Note. The host adapter may, optionally, emulate a master/slave environment to host software where two devices on separate Serial ATA ports are represented to host software as a Device 0 (master) and Device 1 (slave) accessed at the same set of host bus addresses. A host adapter that emulates a master/slave environment manages two sets of shadow registers. This is not a typical Serial ATA environment.

The Serial ATA host adapter and drive share the function of emulating parallel ATA device behavior to provide backward compatibility with existing host systems and software. The Command and Control Block registers, PIO and DMA data transfers, resets, and interrupts are all emulated.

The Serial ATA host adapter contains a set of registers that shadow the contents of the traditional device registers, referred to as the Shadow Register Block. All Serial ATA devices behave like Device 0 devices. For additional information about how Serial ATA emulates parallel ATA, refer to the “Serial ATA: High Speed Serialized AT Attachment” specification. The specification can be downloaded from www.serialata.org.

2.0 Drive specifications

Unless otherwise noted, all specifications are measured under ambient conditions, at 25°C, and nominal power. For convenience, the phrases *the drive* and *this drive* are used throughout this manual to indicate the following drive models:

| | | | |
|--------------|--------------|--------------|-------------|
| STM3500630AS | STM3250824AS | STM3160815AS | STM380815AS |
| STM3320620AS | STM3250820AS | STM3160215AS | STM380215AS |
| STM3320820AS | STM3250310AS | | STM340215AS |

2.1 Specification summary tables

The specifications listed in the following tables are for quick reference. For details on specification measurement or definition, see the appropriate section of this manual.

Table 1: Drive specifications summary for 500 Gbyte models

| Drive specification | STM3500630AS |
|---|---|
| Formatted capacity (512 bytes/sector)* | 500 Gbytes |
| Guaranteed sectors | 976,773,168 |
| Heads | 6 |
| Discs | 3 |
| Bytes per sector | 512 |
| Default sectors per track | 63 |
| Default read/write heads | 16 |
| Default cylinders | 16,383 |
| Recording density | 813 kbits/in max |
| Track density | 145 ktracks/in avg |
| Areal density | 114.4 Gbits/in ² avg |
| Spindle speed | 7,200 RPM |
| Internal data transfer rate | 1,030 Mbits/sec max |
| Sustained data transfer rate OD | 72 Mbytes/sec max |
| I/O data-transfer rate | 300 Mbytes/sec max |
| ATA data-transfer modes supported | PIO modes 0–4 Multiword DMA modes 0–2 Ultra DMA modes 0–6 |
| Cache buffer | 16 Mbytes |
| Height (max) | 26.1 mm (1.028 inches) |
| Width (max) | 101.6 mm (4.000 inches) +/- 0.010 inches |
| Length (max) | 146.99 mm (5.787 inches) |
| Weight (typical) | 635 grams (1.40 lbs) |
| Average latency | 4.16 msec |
| Power-on to ready | 15 sec max |
| Standby to ready | 15 sec max |
| Track-to-track seek time | <0.8 msec typical read; <1.0 typical write |
| Average seek, read | <8.5 msec typical |
| Average seek, write | <10.0 msec typical |
| Startup current (typical) 12V (peak) | 2.8 amps |
| Voltage tolerance (including noise) | 5V ± 5% 12V ± 10% |
| Ambient temperature | 0° to 60°C (operating) –40° to 70°C (nonoperating) |
| Temperature gradient | 20°C per hour max (operating) 30°C per hour max (nonoperating) |
| Relative humidity | 5% to 90% (operating) 5% to 95% (nonoperating) |
| Relative humidity gradient | 30% per hour max |
| Wet bulb temperature | 37.7°C max (operating) 37.7°C max (nonoperating) |
| Altitude, operating | –60.96 m to 3,048 m (–200 ft. to 10,000+ ft.) |
| Altitude, nonoperating (below mean sea level, max) | –60.96 m to 12,192 m (–200 ft. to 40,000+ ft.) |
| Operational Shock | 68 Gs max at 2 msec |
| Non-Operational Shock | 300 Gs max at 2 msec |

| Drive specification | STM3500630AS |
|--|--|
| Vibration, operating | 5–22 Hz: 0.25 Gs, Limited displacement 22–350 Hz: 0.50 Gs 350–500 Hz:: 0.25 Gs |
| Vibration, nonoperating | 5–22 Hz: 0.25 Gs, Limited displacement 22–350 Hz: 5.0 Gs 350–500 Hz:: 1.0 Gs |
| Drive acoustics, sound power | |
| Idle** | 2.8 bels (typical) 3.0 bels (max) |
| Performance seek | 3.7 bels (typical) 3.9 bels (max) |
| Nonrecoverable read errors | 1 per 10 ¹⁴ bits read |
| Annualized Failure Rate (AFR) | 0.34% |
| Warranty | 3 years on distribution units. |
| Contact start-stop cycles | 50,000 at 25°C, 50% rel. humidity |
| Supports Hotplug operation per the Serial ATA Revision 2.5 specification | Yes |

Table 2: Drive specifications summary for 320 Gbyte models

| Drive specification | STM3320820AS | STM3320620AS |
|---|---|--------------|
| Formatted capacity (512 bytes/sector)* | 320 Gbytes | |
| Guaranteed sectors | 625,142,448 | |
| Heads | 4 | |
| Discs | 2 | |
| Bytes per sector | 512 | |
| Default sectors per track | 63 | |
| Default read/write heads | 16 | |
| Default cylinders | 16,383 | |
| Recording density | 781 kbits/in max | |
| Track density | 145 ktracks/in avg | |
| Areal density | 114.4 Gbits/in ² avg | |
| Spindle speed | 7,200 RPM | |
| Internal data transfer rate | 1,030 Mbits/sec max | |
| Sustained data transfer rate OD | 72 Mbytes/sec max | |
| I/O data-transfer rate | 300 Mbytes/sec max | |
| ATA data-transfer modes supported | PIO modes 0–4 Multiword DMA modes 0–2 Ultra DMA modes 0–6 | |
| Cache buffer | 16 Mbytes | 8 Mbytes |
| Height (max) | 26.1 mm (1.028 inches) | |
| Width (max) | 101.6 mm (4.000 inches) +/- 0.010 inches | |
| Length (max) | 146.99 mm (5.787 inches) | |
| Weight (typical) | 635 grams (1.4 lbs) | |
| Average latency | 4.16 msec | |
| Power-on to ready | 15 sec max | |
| Standby to ready | 15 sec max | |
| Track-to-track seek time | <0.8 msec typical read; <1.0 typical write | |
| Average seek, read | <8.5 msec typical | |
| Average seek, write | <10.0 msec typical | |
| Startup current (typical) 12V (peak) | 2.8 amps | |
| Voltage tolerance (including noise) | 5V ± 5% 12V ± 10% | |
| Ambient temperature | 0° to 60°C (operating) –40° to 70°C (nonoperating) | |
| Temperature gradient | 20°C per hour max (operating) 30°C per hour max (nonoperating) | |
| Relative humidity | 5% to 90% (operating) 5% to 95% (nonoperating) | |
| Relative humidity gradient | 30% per hour max | |
| Wet bulb temperature | 37.7°C max (operating) 37.7°C max (nonoperating) | |
| Altitude, operating | –60.96 m to 3,048 m (–200 ft. to 10,000+ ft.) | |
| Altitude, nonoperating (below mean sea level, max) | –60.96 m to 12,192 m (–200 ft. to 40,000+ ft.) | |
| Operational Shock | 68 Gs max at 2 msec | |
| Non-Operational Shock | 350 Gs max at 2 msec | |

| Drive specification | STM3320820AS | STM3320620AS |
|--|--|--------------|
| Vibration, operating | 5–22 Hz: 0.25 Gs, Limited displacement 22–350 Hz: 0.50 Gs 350–500 Hz:: 0.25 Gs | |
| Vibration, nonoperating | 5–22 Hz: 0.25 Gs, Limited displacement 22–350 Hz: 5.0 Gs 350–500 Hz:: 1.0 Gs | |
| Drive acoustics, sound power | | |
| Idle** | 2.5 bels (typical) 2.9 bels (max) | |
| Performance seek | 3.0 bels (typical) 3.2 bels (max) | |
| Nonrecoverable read errors | 1 per 10 ¹⁴ bits read | |
| Annualized Failure Rate (AFR) | 0.34% | |
| Warranty | 3 years on distribution units. | |
| Contact start-stop cycles | 50,000 at 25°C, 50% rel. humidity | |
| Supports Hotplug operation per the Serial ATA Revision 2.5 specification | Yes | |

*One Gbyte equals one billion bytes when referring to hard drive capacity. Accessible capacity may vary depending on operating environment and formatting.

**During periods of drive idle, some offline activity may occur according to the S.M.A.R.T. specification, which may increase acoustic and power to operational levels.

Table 3: Drive specifications summary for 250 Gbyte models

| Drive specification | STM3250824AS | STM3250820AS | STM3250310AS |
|--|---|---|--|
| Formatted capacity (512 bytes/sector)* | 250 Gbytes | | |
| Guaranteed sectors | 488,397,168 | | |
| Heads | 3 | | 2 |
| Discs | 2 | | 1 |
| Bytes per sector | 512 | | |
| Default sectors per track | 63 | | |
| Default read/write heads | 16 | | |
| Default cylinders | 16,383 | | |
| Recording density | 790.1 | 813 kbits/in max | 1,110 kbits/in max |
| Track density | 124.5 ktracks/in avg | 145 ktracks/in avg | 160 ktracks/in avg |
| Areal density | 97.96 Gbits/in ² avg | 114.4 Gbits/in ² avg | 176 Gbits/in ² avg |
| Spindle speed | 7,200 RPM | | |
| Internal data transfer rate | 867.2 Mbits/sec max | 1,030 Mbits/sec max | 1,303 Mbits/sec max |
| Sustained data transfer rate OD | 76.6 Mbytes/sec max | 72 Mbytes/sec max | 110 Mbytes/sec max |
| I/O data-transfer rate | 300 Mbytes/sec max | | |
| ATA data-transfer modes supported | PIO modes 0–4 Multiword DMA modes 0–2 Ultra DMA modes 0–6 | | |
| Cache buffer | 8 Mbytes | | |
| Height (max) | 26.1 mm (1.028 inches) | | 19.99 mm (.787 inches) |
| Width (max) | 101.6 mm (4.000 inches) +/- 0.010 inches | | |
| Length (max) | 146.99 mm (5.787 inches) | | |
| Weight (typical) | 580 grams (1.28 lb.) | 600 grams (1.32 lb.) | 368 grams (.811 lbs) |
| Average latency | 4.16 msec | | |
| Power-on to ready | 11 sec max | | |
| Standby to ready | 11 sec max | 15 sec max | |
| Track-to-track seek time | <0.8 msec typical read, <1.0 msec typical write | | <1.0 msec typical read, <1.2 msec typical write |
| Average seek, read | <8.0 msec typical | <8.5 msec typical | <11.0 msec typical |
| Average seek, write | <9.0 msec typical | <10.0 msec typical | <12.0 msec typical |
| Startup current (typical) 12V (peak) | 2.8 amps | | 2.0 amps |
| Voltage tolerance (including noise) | 5V ± 5% 12V ± 10% | | |
| Ambient temperature | 0° to 60°C per hour max (operating) –40° to 70°C per hour max (nonoperating) | | |

*One Gbyte equals one billion bytes when referring to hard drive capacity. Accessible capacity may vary depending on operating environment and formatting.

**During periods of drive idle, some offline activity may occur according to the S.M.A.R.T. specification, which may increase acoustic and power to operational levels.

Table 6: Drive specifications summary for the 40 Gbyte model

| Drive specification | STM340215AS |
|---|---|
| Formatted capacity (512 bytes/sector)* | 40 Gbytes |
| Guaranteed sectors | 78,165,360 |
| Heads | 1 |
| Discs | 1 |
| Bytes per sector | 512 |
| Default sectors per track | 63 |
| Default read/write heads | 16 |
| Default cylinders | 16,383 |
| Recording density | 824 kbits/in max |
| Track density | 137.259 ktracks/in avg |
| Areal density | 101 Gbits/in ² avg |
| Spindle speed | 7,200 RPM |
| Internal data transfer rate | 930 Mbits/sec max |
| Sustained data transfer rate OD | 78 Mbytes/sec max |
| I/O data-transfer rate | 300 Mbytes/sec max |
| ATA data-transfer modes supported | PIO modes 0–4 Multiword DMA modes 0–2 Ultra DMA modes 0–6 |
| Cache buffer | 2 Mbytes |
| Height (max) | 19.99 mm (0.787 inches) |
| Width (max) | 101.6 mm (4.000 inches) +/- 0.010 inches |
| Length (max) | 146.99 mm (5.787 inches) |
| Weight (typical) | 365 grams (0.805 lb.) |
| Average latency | 4.16 msec |
| Power-on to ready | 7.9 sec max |
| Standby to ready | 7.9 sec max |
| Track-to-track seek time | <1.0 msec typical read; <1.2 msec typical write |
| Average seek, read | <11 msec typical |
| Average seek, write | <12 msec typical |
| Startup current (typical) 12V (peak) | 2.8 amps |
| Voltage tolerance (including noise) | 5V ± 5% 12V ± 10% |
| Ambient temperature | 0° to 60°C (operating) –40° to 75°C (nonoperating) |
| Temperature gradient | 20°C per hour max (operating) 30°C per hour max (nonoperating) |
| Relative humidity | 5% to 90% (operating) 5% to 95% (nonoperating) |
| Relative humidity gradient | 30% per hour max |
| Wet bulb temperature | 37.7°C max (operating) 40°C max (nonoperating) |
| Altitude, operating | –60.96 m to 3,048 m (–200 ft. to 10,000+ ft.) |
| Altitude, nonoperating (below mean sea level, max) | –60.96 m to 12,192 m (–200 ft. to 40,000+ ft.) |
| Operational Shock | 63 Gs max at 2 msec |
| Non-Operational Shock | 350 Gs max at 2 msec |

| Drive specification | STM340215AS |
|--|---|
| Vibration, operating | 5–22 Hz: 0.25 Gs, Limited displacement 22–350 Hz: 0.5 Gs 350–500 Hz:: 0.25 Gs |
| Vibration, nonoperating | 5–22 Hz: 0.25 Gs, Limited displacement 22–350 Hz: 5.0 Gs 350–500 Hz:: 1.0 Gs |
| Drive acoustics, sound power | |
| Idle** | 2.8 bels (typical) 3.0 bels (max) |
| Quiet seek | 3.0 bels (typical) 3.2 bels (max) |
| Nonrecoverable read errors | 1 per 10 ¹⁴ bits read |
| Annualized Failure Rate (AFR) | 0.34% |
| Warranty | 3 years on distribution units.. |

| Supports Hotplug operation per the Serial ATA Revision 2.5 specification | Yes |

*One Gbyte equals one billion bytes when referring to hard drive capacity. Accessible capacity may vary depending on operating environment and formatting.

**During periods of drive idle, some offline activity may occur according to the S.M.A.R.T. specification, which may increase acoustic and power to operational levels.

2.2 Formatted capacity

| Model | Formatted capacity* | Guaranteed sectors | Bytes per sector |
|--------------|---------------------|--------------------|------------------|
| STM3500630AS | 500 Gbytes | 976,773,168 | 512 |
| STM3320620AS | 320 Gbytes | 625,142,448 | 512 |
| STM3320820AS | 320 Gbytes | 625,142,448 | 512 |
| STM3250824AS | 250 Gbytes | 488,397,168 | 512 |
| STM3250820AS | 250 Gbytes | 488,397,168 | 512 |
| STM3250310AS | 250 Gbytes | 488,397,168 | 512 |
| STM3160815AS | 160 Gbytes | 312,581,808 | 512 |
| STM3160215AS | 160 Gbytes | 312,581,808 | 512 |
| STM380815AS | 80 Gbytes | 156,301,488 | 512 |
| STM380215AS | 80 Gbytes | 156,301,488 | 512 |
| STM340215AS | 40 Gbytes | 78,165,360 | 512 |

*One Gbyte equals one billion bytes when referring to hard drive capacity. Accessible capacity may vary depending on operating environment and formatting.

2.2.1 LBA mode

When addressing these drives in LBA mode, all blocks (sectors) are consecutively numbered from 0 to $n-1$, where n is the number of guaranteed sectors as defined above.

See Section 4.3.1, "Identify Device command" (words 60-61 and 100-103) for additional information about 48-bit addressing support of drives with capacities over 137 Gbytes.

2.3 Default logical geometry

| Cylinders | Read/write heads | Sectors per track |
|-----------|------------------|-------------------|
| 16,383 | 16 | 63 |

LBA mode

When addressing these drives in LBA mode, all blocks (sectors) are consecutively numbered from 0 to $n-1$, where n is the number of guaranteed sectors as defined above.

2.4 Recording and interface technology

| | STM3500630AS | STM3320620AS STM3320820AS | STM3250824AS | STM3250820AS |
|---|---------------------|--------------------------------------|---------------------|---------------------|
| Interface | Serial ATA (SATA) | | | |
| Recording method | Perpendicular | | | |
| Recording density (kbits/inch max) | 813 | 781 | 790.1 | 813 |
| Track density (ktracks/inch avg) | 145 | | 124.5 | 145 |
| Areal density (Gbits/inch ² avg) | 114.4 | | 97.96 | 114.4 |
| Spindle speed (RPM) | 7,200 ± 0.2% | | | |
| Internal data transfer rate (Mbits/sec max) | 1,030 | | 867.2 | 1,030 |
| Sustained data transfer rate (Mbytes/sec max) | 72 | | 76.6 | 72 |
| I/O data-transfer rate (Mbytes/sec max) | 300 | | | |

| | STM3250310AS | STM3160815AS, STM3160215AS, STM380815AS, STM380215AS and STM340215AS |
|---|---------------------|---|
| Interface | Serial ATA (SATA) | |
| Recording method | Perpendicular | |
| Recording density (kbits/inch max) | 1,110 | 824 |
| Track density (ktracks/inch avg) | 160 | 137.259 |
| Areal density (Gbits/inch ² avg) | 176 | 101 |
| Spindle speed (RPM) | 7,200 ± 0.2% | |
| Internal data transfer rate (Mbits/sec max) | 1,303 | 930 |
| Sustained data transfer rate (Mbytes/sec max) | 110 | 78 |
| I/O data-transfer rate (Mbytes/sec max) | 300 | |

2.5 Physical characteristics

| | |
|---|-----------------------------------|
| Maximum height | |
| STM3500630AS, STM3320620AS, STM3320820AS, STM3250824AS and STM3250820AS | 26.1 mm (1.028 inches) |
| STM3250310AS, STM3160815AS, STM3160215AS, STM380815AS, STM380215AS and STM340215AS | 19.99 mm (0.787 inches) |
| Maximum width | 101.6 mm (4.000 +/- 0.010 inches) |
| Maximum length | 146.99 mm (5.787 inches) |
| Typical weight | |
| STM3500630AS, STM3320620AS and STM3320820AS | 635 grams (1.4 lbs) |
| STM3250820AS | 600 grams (1.32 lbs) |
| STM3250824AS | 580 grams (1.28 lb.) |
| STM3250310AS | 368 grams (0.811 lbs) |
| STM3160815AS and STM3160215AS | 380 grams (0.838 lbs) |
| STM380815AS, STM380215AS and STM340215AS | 365 grams (0.805 lbs) |
| Cache buffer | |
| STM3500630AS and STM3320620AS | 16 Mbytes (16,384 kbytes) |
| STM3320820AS, STM3250824AS, STM3250820AS, STM3250310AS, STM3160815AS and STM380815AS | 8 Mbytes (8,192 kbytes) |
| STM3160215AS, STM380215AS and STM340215AS | 2 Mbytes (2,048 kbytes) |

2.6 Seek time

Seek measurements are taken with nominal power at 25°C ambient temperature. All times are measured using drive diagnostics. The specifications in the table below are defined as follows:

- Track-to-track seek time is an average of all possible single-track seeks in both directions.
- Average seek time is a true statistical random average of at least 5,000 measurements of seeks between random tracks, less overhead.

| Typical seek times (msec) | 500-320 GB STM3250820AS* | | STM3250824AS | | STM3250310AS** | | 160 - 80 GB STM340215AS** | |
|---------------------------|-----------------------------|-------|--------------|-------|----------------|-------|------------------------------|-------|
| | Read | Write | Read | Write | Read | Write | Read | Write |
| Track-to-track | <0.8 | <1.0 | <0.8 | <1.0 | <1.0 | <1.2 | <1.0 | <1.2 |
| Average | <8.5 | <10.0 | <8.0 | <9.0 | <11.0 | <12.0 | <11.0 | <12.0 |
| Average latency: | 4.16 | | | | | | | |

*Measured in performance mode.

**Measured in quiet mode.

Note. These drives are designed to consistently meet the seek times represented in this manual. Physical seeks, regardless of mode (such as track-to-track and average), are expected to meet the noted values. However, due to the manner in which these drives are formatted, benchmark tests that include command overhead or measure logical seeks may produce results that vary from these specifications.

2.7 Start/stop times

| | 500-320 GB | STM3250824AS | STM3250820AS STM3250310AS | 160 - 40 GB |
|-----------------------------|------------|--------------|------------------------------|-------------|
| Power-on to Ready (sec) | 15 (max) | 11 (max) | 11 (max) | 7.9 (max) |
| Standby to Ready (sec) | 15 (max) | 11 (max) | 15 (max) | 7.9 (max) |
| Ready to spindle stop (sec) | 10 (max) | 12 (max) | 10 (max) | 10 (max) |

2.8 Power specifications

The drive receives DC power (+5V or +12V) through a native SATA power connector. See Figure 4 on page 30.

2.8.1 Power consumption

Power requirements for the drives are listed in the table on page 9. Typical power measurements are based on an average of drives tested, under nominal conditions, using 5.0V and 12.0V input voltage at 25°C ambient temperature.

- **Spinup power**

Spinup power is measured from the time of power-on to the time that the drive spindle reaches operating speed.

- **Idle mode power**

Idle mode power is measured with the drive up to speed, with servo electronics active and with the heads in a random track location.

- **Seek mode**

During seek mode, the read/write actuator arm moves toward a specific position on the disc surface and does not execute a read or write operation. Servo electronics are active. Seek mode power represents the worst-case power consumption, using only random seeks with read or write latency time. This mode is not typical and is provided for worst-case information.

- **Standby mode**

During Standby mode, the drive accepts commands, but the drive is not spinning, and the servo and read/write electronics are in power-down mode.

Table 7: DC power requirements

**STM3500630AS, STM3320620AS, STM3320820AS, STM3250820AS
STM3160815AS, STM3160215AS, STM380815AS, STM380215AS and STM340215AS**

| Power dissipation | Avg (watts 25° C) | Avg 5V typ amps | Avg 12V typ amps |
|----------------------------|-------------------|-----------------|------------------|
| Spinup | — | — | 2.8 (peak) |
| Idle* | 9.30 | 0.611 | 0.520 |
| Seeking (random, 20% idle) | 12.60 | 0.613 | 0.795 |
| Standby and Sleep | 0.80 | 0.106 | 0.023 |

STM3250310AS

| Power dissipation | Avg (watts 25° C) | Avg 5V typ amps | Avg 12V typ amps |
|----------------------------|-------------------|-----------------|------------------|
| Spinup | — | — | 2.0 (peak) |
| Idle* | 5.35 | 0.528 | 0.226 |
| Seeking (random, 20% idle) | 8.35 | 0.573 | 0.458 |
| Standby and Sleep | 1.80 | 0.035 | 0.008 |

STM3250824AS

| Power dissipation | Avg (watts 25° C) | Avg 5V typ amps | Avg 12V typ amps |
|----------------------------|-------------------|-----------------|------------------|
| Spinup | — | — | 2.8 (peak) |
| Idle* | 7.75 | 0.512 | 0.432 |
| Seeking (random, 20% idle) | 11.35 | 0.497 | 0.738 |
| Standby and Sleep | 1.24 | 0.221 | 0.011 |

*During periods of drive idle, some offline activity may occur according to the S.M.A.R.T. specification, which may increase acoustic and power to operational levels.

2.8.1.1 Typical current profiles

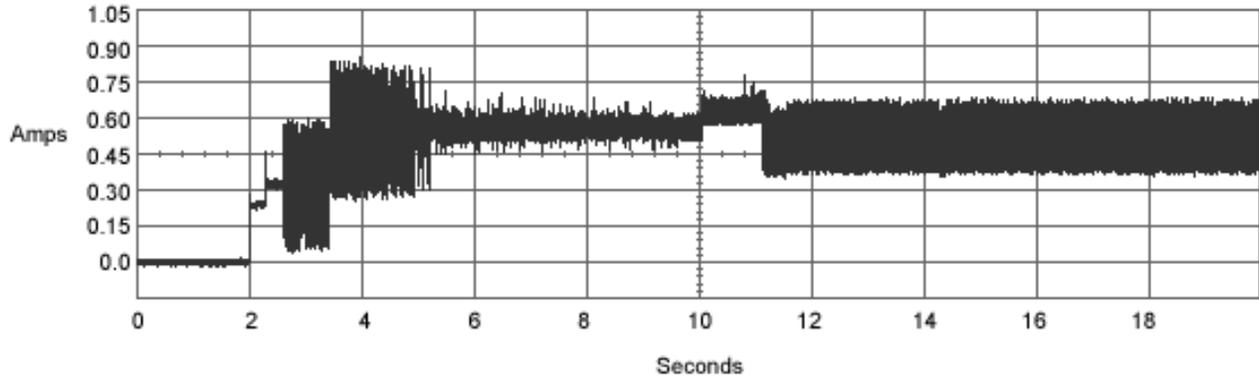

Figure 1. Typical 5V startup and operation current profile

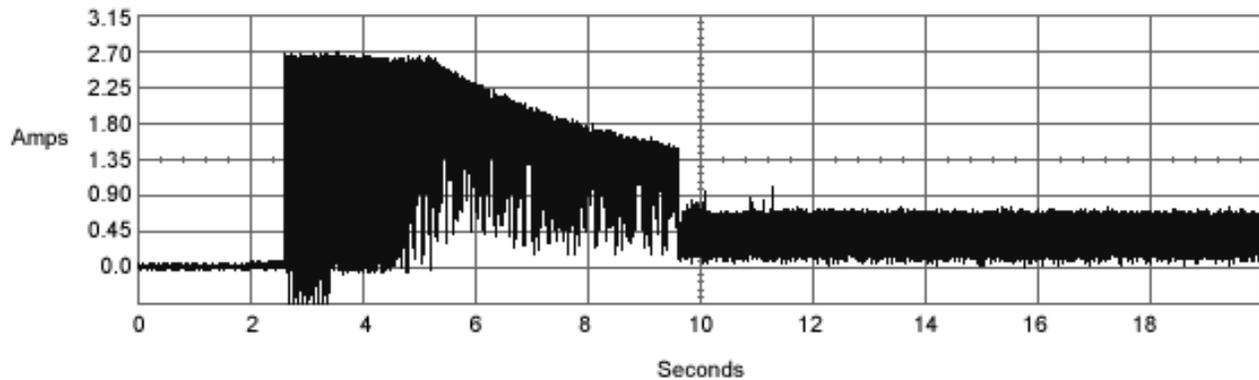

Figure 2. Typical 12V startup and operation current profile

2.8.2 Conducted noise

Input noise ripple is measured at the host system power supply across an equivalent 80-ohm resistive load on the +12 volt line or an equivalent 15-ohm resistive load on the +5 volt line.

- Using 12-volt power, the drive is expected to operate with a maximum of 120 mV peak-to-peak square-wave injected noise at up to 10 MHz.
- Using 5-volt power, the drive is expected to operate with a maximum of 100 mV peak-to-peak square-wave injected noise at up to 10 MHz.

Note. Equivalent resistance is calculated by dividing the nominal voltage by the typical RMS read/write current.

2.8.3 Voltage tolerance

Voltage tolerance (including noise):

5V \pm 5%

12V \pm 10%

2.8.4 Power-management modes

The drive provides programmable power management to provide greater energy efficiency. In most systems, you can control power management through the system setup program. The drive features the following power-management modes:

| Power modes | Heads | Spindle | Buffer |
|-------------|----------|----------|----------|
| Active | Tracking | Rotating | Enabled |
| Idle | Tracking | Rotating | Enabled |
| Standby | Parked | Stopped | Enabled |
| Sleep | Parked | Stopped | Disabled |

- **Active mode**

The drive is in Active mode during the read/write and seek operations.

- **Idle mode**

The buffer remains enabled, and the drive accepts all commands and returns to Active mode any time disc access is necessary.

- **Standby mode**

The drive enters Standby mode when the host sends a Standby Immediate command. If the host has set the standby timer, the drive can also enter Standby mode automatically after the drive has been inactive for a specifiable length of time. The standby timer delay is established using a Standby or Idle command. In Standby mode, the drive buffer is enabled, the heads are parked and the spindle is at rest. The drive accepts all commands and returns to Active mode any time disc access is necessary.

- **Sleep mode**

The drive enters Sleep mode after receiving a Sleep command from the host. In Sleep mode, the drive buffer is disabled, the heads are parked and the spindle is at rest. The drive leaves Sleep mode after it receives a Hard Reset or Soft Reset from the host. After receiving a reset, the drive exits Sleep mode and enters Standby mode with all current translation parameters intact.

- **Idle and Standby timers**

Each time the drive performs an Active function (read, write or seek), the standby timer is reinitialized and begins counting down from its specified delay times to zero. If the standby timer reaches zero before any drive activity is required, the drive makes a transition to Standby mode. In both Idle and Standby mode, the drive accepts all commands and returns to Active mode when disc access is necessary.

2.9 Environmental specifications

2.9.1 Ambient temperature

Ambient temperature is defined as the temperature of the environment immediately surrounding the drive. Actual drive case temperature should not exceed 69°C (156°F) within the operating ambient conditions.

Above 1,000 feet (305 meters), the maximum temperature is derated linearly to 112°F (44°C) at 10,000 feet (3,048 meters).

| | |
|---------------|------------------------------|
| Operating: | 0° to 60°C (32° to 140°F) |
| Nonoperating: | -40° to 70°C (-40° to 158°F) |

2.9.2 Temperature gradient

| | |
|---------------|---|
| Operating: | 20°C per hour (68°F per hour max), without condensation |
| Nonoperating: | 30°C per hour (86°F per hour max) |

2.9.3 Humidity

2.9.3.1 Relative humidity

| | |
|---------------|--|
| Operating: | 5% to 90% noncondensing (30% per hour max) |
| Nonoperating: | 5% to 95% noncondensing (30% per hour max) |

2.9.3.2 Wet bulb temperature

| | | |
|---------------|--|---------------------|
| Operating: | All models | 37.7°C (99.9°F max) |
| Nonoperating: | STM3500630AS, STM3320620AS, STM3320820AS, STM3250824AS, STM3250820AS, STM3250310AS | 37.7°C (99.9°F max) |
| | STM3250824AS, STM3160815AS, STM3160215AS, STM380815AS, STM380215AS and STM340215AS | 40°C (104°F max) |

2.9.4 Altitude

| | |
|---------------|--|
| Operating: | -60.96 m to 3,048 m (-200 ft. to 10,000+ ft.) |
| Nonoperating: | -60.96 m to 12,192 m (-200 ft. to 40,000+ ft.) |

2.9.5 Shock

All shock specifications assume that the drive is mounted securely with the input shock applied at the drive mounting screws. Shock may be applied in the X, Y or Z axis.

2.9.5.1 Operating shock

STM3500630AS, STM3320620AS, STM3320820AS, STM3250820AS, STM3160815AS, STM3160215AS, STM380815AS, STM380215AS and STM340215AS

These drives comply with the performance levels specified in this document when subjected to a maximum operating shock of 68 Gs based on half-sine shock pulses of 2 msec. Shocks should not be repeated more than two times per second.

STM3250824AS and STM3250310AS

These drives comply with the performance levels specified in this document when subjected to a maximum operating shock of 63 Gs based on half-sine shock pulses of 2 msec. Shocks should not be repeated more than two times per second.

2.9.5.2 Nonoperating shock

STM3320620AS, STM3320820AS, STM3250824AS, STM3250820AS, STM3250310AS, STM3160815AS, STM3160215AS, STM380815AS, STM380215AS and STM340215AS

The nonoperating shock level that the drive can experience without incurring physical damage or degradation in performance when subsequently put into operation is 350 Gs based on a nonrepetitive half-sine shock pulse of 2 msec duration.

STM3500630AS

The nonoperating shock level that the drive can experience without incurring physical damage or degradation in performance when subsequently put into operation is 300 Gs based on a nonrepetitive half-sine shock pulse of 2 msec duration.

2.9.6 Vibration

All vibration specifications assume that the drive is mounted securely with the input vibration applied at the drive mounting screws. Vibration may be applied in the X, Y or Z axis.

2.9.6.1 Operating vibration

The maximum vibration levels that the drive may experience while meeting the performance standards specified in this document are specified below.

| | |
|------------|--------------------------------|
| 5–22 Hz | 0.25 Gs (Limited displacement) |
| 22–350 Hz | 0.50 Gs |
| 350–500 Hz | 0.25 Gs |

2.9.6.2 Nonoperating vibration

The maximum nonoperating vibration levels that the drive may experience without incurring physical damage or degradation in performance when subsequently put into operation are specified below.

| | |
|------------|--------------------------------|
| 5–22 Hz | 0.25 Gs (limited displacement) |
| 22–350 Hz | 5.0 Gs |
| 350–500 Hz | 1.0 Gs |

2.10 Acoustics

Drive acoustics are measured as overall A-weighted acoustic sound power levels (no pure tones). All measurements are consistent with ISO document 7779. Sound power measurements are taken under essentially free-field conditions over a reflecting plane. For all tests, the drive is oriented with the cover facing upward.

Note. For seek mode tests, the drive is placed in seek mode only. The number of seeks per second is defined by the following equation:

$$(\text{Number of seeks per second} = 0.4 / (\text{average latency} + \text{average access time}))$$

Table 8: Fluid Dynamic Bearing (FDB) motor acoustics

| | Idle* | Seek |
|--|----------------------------------|--|
| STM3500630AS | 2.8 bels (typ) 3.0 bels (max) | 3.7 bels (typ)** 3.9 bels (max)** |
| STM3320620AS, STM3320820AS, and STM3250820AS | 2.5 bels (typ) 2.9 bels (max) | 3.0 bels (typ)** 3.2 bels (max)** |
| STM3250824AS | 2.7 bels (typ) 2.9 bels (max) | 3.4 bels (typ)** 3.6 bels (max)** |
| STM3250310AS | 2.6 bels (typ) 2.7 bels (max) | 2.7 bels (typ)*** 2.8 bels (max)*** |
| STM3160815AS, STM3160215AS, STM380815AS STM380215AS and STM340215AS | 2.8 bels (typ) 3.0 bels (max) | 3.0 bels (typ)*** 3.2 bels (max)*** |

*During periods of drive idle, some offline activity may occur according to the S.M.A.R.T. specification, which may increase acoustic and power to operational levels.

**Measured in performance mode.

***Measured in quiet mode.

2.11 Electromagnetic immunity

When properly installed in a representative host system, the drive operates without errors or degradation in performance when subjected to the radio frequency (RF) environments defined in the following table:

Table 9: Radio frequency environments

| Test | Description | Performance level | Reference standard |
|---------------------------|--|-------------------|-----------------------------------|
| Electrostatic discharge | Contact, HCP, VCP: ± 4 kV; Air: ± 8 kV | B | EN 61000-4-2: 95 |
| Radiated RF immunity | 80 to 1,000 MHz, 3 V/m, 80% AM with 1 kHz sine 900 MHz, 3 V/m, 50% pulse modulation @ 200 Hz | A | EN 61000-4-3: 96 ENV 50204: 95 |
| Electrical fast transient | ± 1 kV on AC mains, ± 0.5 kV on external I/O | B | EN 61000-4-4: 95 |
| Surge immunity | ± 1 kV differential, ± 2 kV common, AC mains | B | EN 61000-4-5: 95 |
| Conducted RF immunity | 150 kHz to 80 MHz, 3 Vrms, 80% AM with 1 kHz sine | A | EN 61000-4-6: 97 |
| Voltage dips, interrupts | 0% open, 5 seconds 0% short, 5 seconds 40%, 0.10 seconds 70%, 0.01 seconds | C C C B | EN 61000-4-11: 94 |

2.12 Reliability

2.12.1 Annualized Failure Rate (AFR) and Mean Time Between Failures (MTBF)

The product shall achieve an Annualized Failure Rate (AFR) of 0.34% (MTBF of 0.7 million hours) when operated in an environment of ambient air temperatures of 25°C. Operation at temperatures outside the specifications in Section 2.9 may increase the product AFR (decrease MTBF). AFR and MTBF are population statistics that are not relevant to individual units.

AFR and MTBF specifications are based on the following assumptions for desktop personal computer environments:

- 2400 power-on-hours per year.
- 10,000 average motor start/stop cycles per year.
- Operations at nominal voltages.
- Temperatures outside the specifications in Section 2.9 may reduce the product reliability.
- Normal I/O duty cycle for desktop personal computers. Operation at excessive I/O duty cycle may degrade product reliability.

The desktop personal computer environment of power-on-hours, temperature, and I/O duty cycle affect the product AFR and MTBF. The AFR and MTBF will be degraded if used in an enterprise application.

| | |
|-------------------------------|---|
| Nonrecoverable read errors | 1 per 10 ¹⁴ bits read, max |
| Annualized Failure Rate (AFR) | 0.34% (nominal power, 25°C ambient temperature) |
| Contact start-stop cycles | 50,000 cycles (at nominal voltage and temperature, with 60 cycles per hour and a 50% duty cycle) |
| Warranty | 3 years on distribution units. |
| Preventive maintenance | None required. |

2.13 Agency certification

2.13.1 Safety certification

The drives are recognized in accordance with UL 1950 and CSA C22.2 (950) and meet all applicable sections of IEC950 and EN 60950.

2.13.2 Electromagnetic compatibility

Hard drives that display the CE mark comply with the European Union (EU) requirements specified in the Electromagnetic Compatibility Directive (89/336/EEC). Testing is performed to the levels specified by the product standards for Information Technology Equipment (ITE). Emission levels are defined by EN 55022, Class B and the immunity levels are defined by EN 55024.

Drives are tested in representative end-user systems. Although CE-marked drives comply with the directives when used in the test systems, we cannot guarantee that all systems will comply with the directives. The drive is designed for operation inside a properly designed enclosure, with properly shielded I/O cable (if necessary) and terminators on all unused I/O ports. Computer manufacturers and system integrators should confirm EMC compliance and provide CE marking for their products.

Korean RRL

If these drives have the Korea Ministry of Information and Communication (MIC) logo, they comply with paragraph 1 of Article 11 of the Electromagnetic Compatibility control Regulation and meet the Electromagnetic Compatibility (EMC) Framework requirements of the Radio Research Laboratory (RRL) Ministry of Information and Communication Republic of Korea.

These drives have been tested and comply with the Electromagnetic Interference/Electromagnetic Susceptibility (EMI/EMS) for Class B products. Drives are tested in a representative, end-user system by a Korean-recognized lab.

- Family name: DiamondMax
- Certificate number: Pending

Australian C-Tick (N176)

If these models have the C-Tick marking, they comply with the Australia/New Zealand Standard AS/NZS3548 1995 and meet the Electromagnetic Compatibility (EMC) Framework requirements of the Australian Communication Authority (ACA).

2.13.3 FCC verification

These drives are intended to be contained solely within a personal computer or similar enclosure (not attached as an external device). As such, each drive is considered to be a subassembly even when it is individually marketed to the customer. As a subassembly, no Federal Communications Commission verification or certification of the device is required.

Seagate has tested this device in enclosures as described above to ensure that the total assembly (enclosure, disc drive, motherboard, power supply, etc.) does comply with the limits for a Class B computing device, pursuant to Subpart J, Part 15 of the FCC rules. Operation with noncertified assemblies is likely to result in interference to radio and television reception.

Radio and television interference. This equipment generates and uses radio frequency energy and if not installed and used in strict accordance with the manufacturer's instructions, may cause interference to radio and television reception.

This equipment is designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio or television, which can be determined by turning the equipment on and off, you are encouraged to try one or more of the following corrective measures:

- Reorient the receiving antenna.
- Move the device to one side or the other of the radio or TV.
- Move the device farther away from the radio or TV.
- Plug the computer into a different outlet so that the receiver and computer are on different branch outlets.

If necessary, you should consult your dealer or an experienced radio/television technician for additional suggestions. You may find helpful the following booklet prepared by the Federal Communications Commission: *How to Identify and Resolve Radio-Television Interference Problems*. This booklet is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Refer to publication number 004-000-00345-4.

2.14 Environmental protection

Maxtor designs its products to meet environmental protection requirements worldwide, including regulations restricting certain chemical substances.

2.14.1 European Union Restriction of Hazardous Substances (RoHS) Directive

Seagate designs its products to meet environmental protection requirements worldwide, including regulations restricting certain chemical substances. This drive is manufactured with components and materials that comply with the RoHS Directive.

2.14.2 China Restriction of Hazardous Substances (RoHS) Directive

2.14.2 中国限制危险物品的指令

This product has an Environmental Protection Use Period (EPUP) of 20 years. The following table contains information mandated by China's "Marking Requirements for Control of Pollution Caused by Electronic Information Products" Standard.

该产品具有20年的环境保护使用周期（EPUP）。下表包含了中国“电子产品所导致的污染的控制的记号要求”所指定的信息。

| Name of Parts 部件名称 | Toxic or Hazardous Substances or Elements有毒有害物质或元素 | | | | | |
|-----------------------|--|----------------------|----------------------|---|---|---|
| | Lead 铅 (Pb) | Mercury 汞 (Hg) | Cadmium 镉 (Cd) | Hexavalent Chromium 六价铬 (Cr6+) | Polybrominated Biphenyl 多溴联苯 (PBB) | Polybrominated Diphenyl Ether 多溴二苯醚 (PBDE) |
| PCBA | X | O | O | O | O | O |
| HDA | X | O | O | O | O | O |

"O" indicates the hazardous and toxic substance content of the part (at the homogenous material level) is lower than the threshold defined by the China RoHS MCV Standard.

“O”表示该部件（于同类物品程度上）所含的危险和有毒物质低于中国RoHS MCV标准所定义的门槛值。

"X" indicates the hazardous and toxic substance content of the part (at the homogenous material level) is over the threshold defined by the China RoHS MCV Standard.

“X”表示该部件（于同类物品程度上）所含的危险和有毒物质超出中国RoHS MCV标准所定义的门槛值。

2.15 Corrosive environment

Maxtor electronic drive components pass accelerated corrosion testing equivalent to 10 years exposure to light industrial environments containing sulfurous gases, chlorine and nitric oxide, classes G and H per ASTM B845. However, this accelerated testing cannot duplicate every potential application environment. Users should use caution exposing any electronic components to uncontrolled chemical pollutants and corrosive chemicals as electronic drive component reliability can be affected by the installation environment. The silver, copper, nickel and gold films used in Maxtor products are especially sensitive to the presence of sulfide, chloride, and nitrate contaminants. Sulfur is found to be the most damaging. In addition, electronic components should never be exposed to condensing water on the surface of the printed circuit board assembly (PCBA) or exposed to an ambient relative humidity greater than 95%. Materials used in cabinet fabrication, such as vulcanized rubber, that can outgas corrosive compounds should be minimized or eliminated. The useful life of any electronic equipment may be extended by replacing materials near circuitry with sulfide-free alternatives.

3.0 Configuring and mounting the drive

This section contains the specifications and instructions for configuring and mounting the drive.

3.1 Handling and static-discharge precautions

After unpacking, and before installation, the drive may be exposed to potential handling and electrostatic discharge (ESD) hazards. Observe the following standard handling and static-discharge precautions:

Caution:

- Before handling the drive, put on a grounded wrist strap, or ground yourself frequently by touching the metal chassis of a computer that is plugged into a grounded outlet. Wear a grounded wrist strap throughout the entire installation procedure.
- Handle the drive by its edges or frame *only*.
- The drive is extremely fragile—handle it with care. Do not press down on the drive top cover.
- Always rest the drive on a padded, antistatic surface until you mount it in the computer.
- Do not touch the connector pins or the printed circuit board.
- Do not remove the factory-installed labels from the drive or cover them with additional labels. Removal voids the warranty. Some factory-installed labels contain information needed to service the drive. Other labels are used to seal out dirt and contamination.

3.2 Configuring the drive

Each drive on the Serial ATA interface connects point-to-point with the Serial ATA host adapter. There is no master/slave relationship because each drive is considered a master in a point-to-point relationship. If two drives are attached on one Serial ATA host adapter, the host operating system views the two devices as if they were both “masters” on two separate ports. Both drives behave as if they are Device 0 (master) devices.

Serial ATA drives are designed for easy installation. It is usually not necessary to set any jumpers on the drive for proper operation; however, if you connect the drive and receive a “drive not detected” error, your SATA-equipped motherboard or host adapter may use a chipset that does not support SATA speed autonegotiation. If you have a motherboard or host adapter that does not support autonegotiation:

- Install a jumper as shown in Figure 3 below to limit the data transfer rate to 1.5 Gbits per second (and leave the drive connected to the SATA-equipped motherboard or host adapter that doesn't support autonegotiation) or
- Install a SATA host adapter that supports autonegotiation, leave the drive jumper block set to “Normal operation” (see Figure 3 below), and connect the drive to that adapter. This option has the benefit of not limiting the drive to a 1.5 Gbits/sec transfer rate.

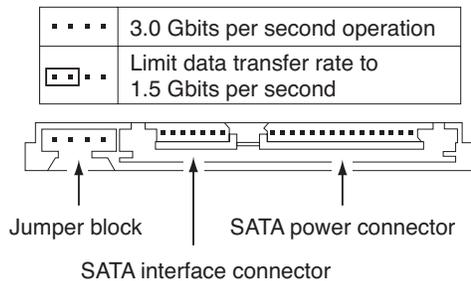

Figure 3. Serial ATA connectors

3.3 Serial ATA cables and connectors

The Serial ATA interface cable consists of four conductors in two differential pairs, plus three ground connections. The cable size may be 30 to 26 AWG with a maximum length of one meter (39.37 inches). See Table 10 for connector pin definitions. Either end of the SATA signal cable can be attached to the drive or host.

For direct backplane connection, the drive connectors are inserted directly into the host receptacle. The drive and the host receptacle incorporate features that enable the direct connection to be hot pluggable and blind mateable.

For installations which require cables, you can connect the drive as illustrated in Figure 4.

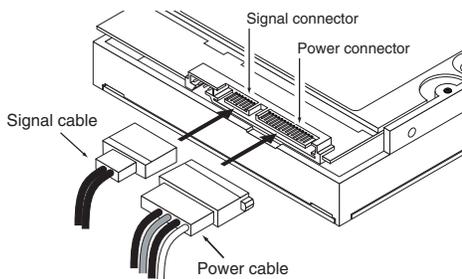

Figure 4. Attaching SATA cabling

Each cable is keyed to ensure correct orientation. DiamondMax 21 drives support latching SATA connectors.

3.4 Drive mounting

You can mount the drive in any orientation using four screws in the side-mounting holes or four screws in the bottom-mounting holes. See Figure 5 for drive mounting dimensions. Follow these important mounting precautions when mounting the drive:

- Allow a minimum clearance of 0.030 inches (0.76 mm) around the entire perimeter of the drive for cooling.
- Use only 6-32 UNC mounting screws.
- The screws should be inserted no more than 0.150 inch (3.81 mm) into the bottom or side mounting holes.
- Do not overtighten the mounting screws (maximum torque: 6 inch-lb).

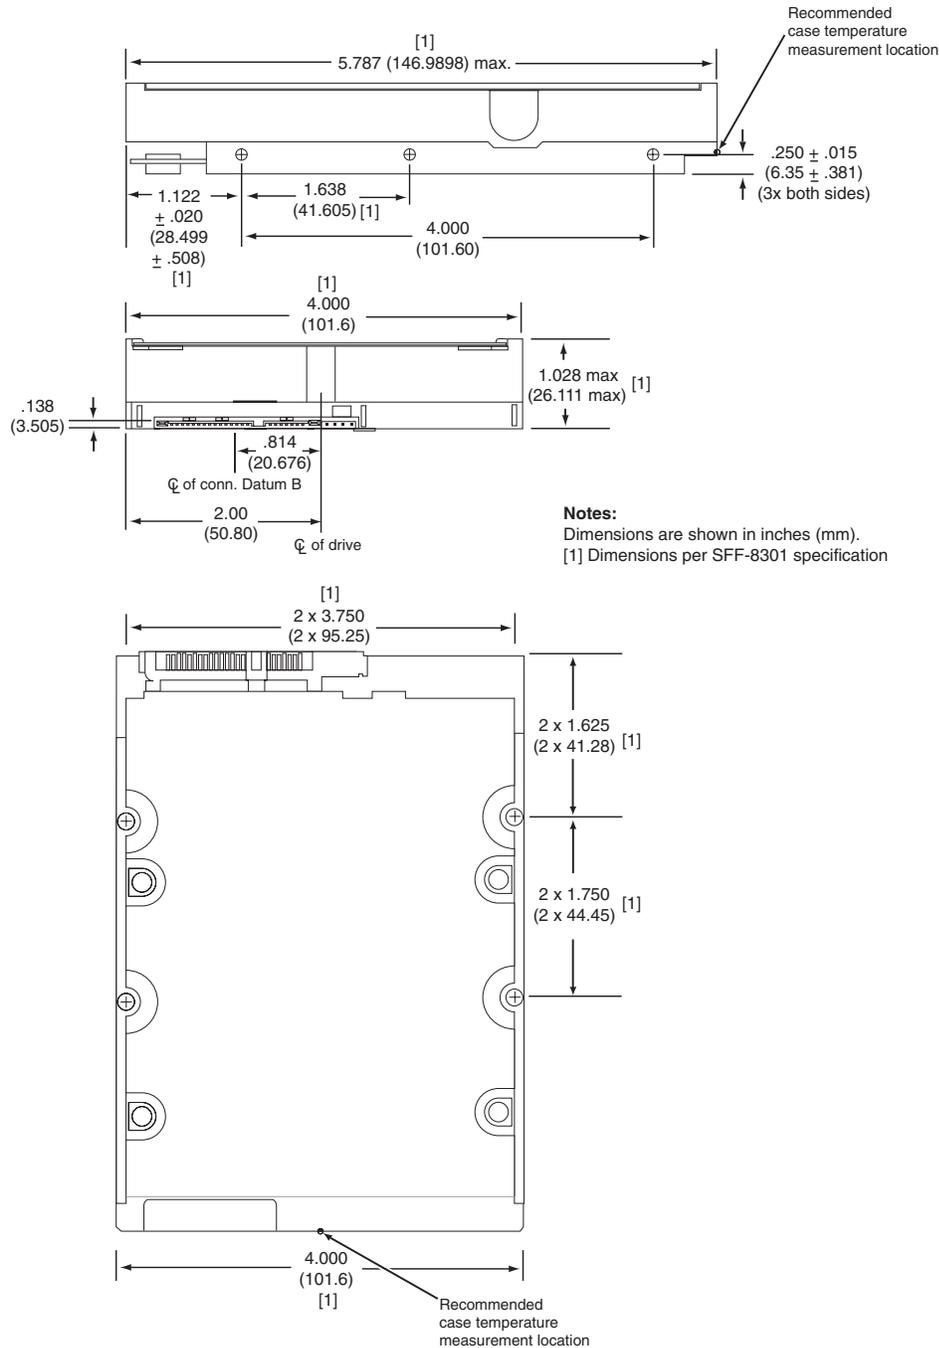

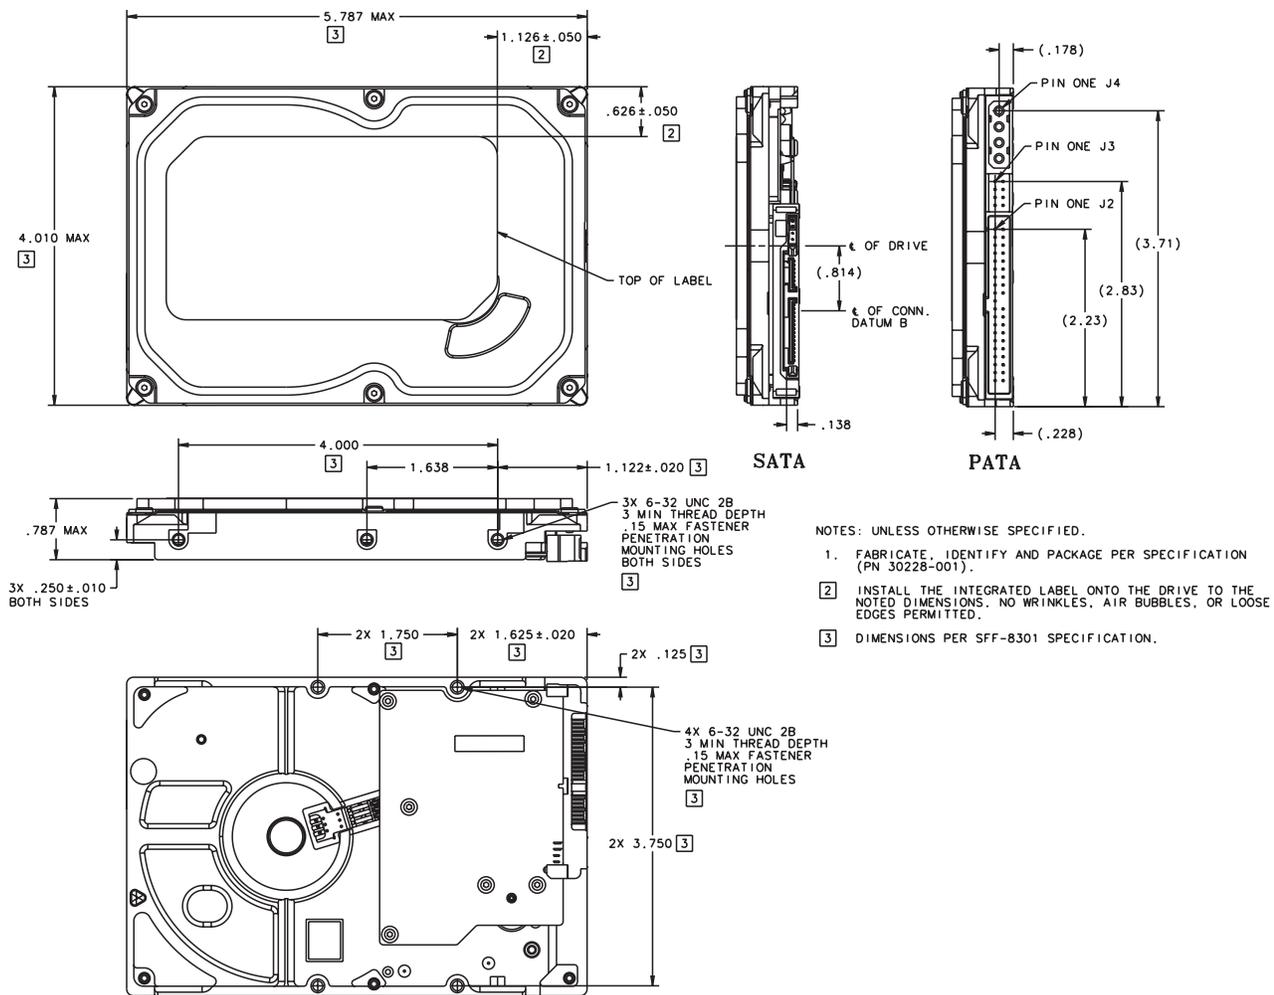

Figure 5. Drive dimensions for STM3500630AS, STM3250824AS, STM3250820AS and 320 GB models

- NOTES: UNLESS OTHERWISE SPECIFIED.
1. FABRICATE, IDENTIFY AND PACKAGE PER SPECIFICATION (PN 30228-001).
 2. INSTALL THE INTEGRATED LABEL ONTO THE DRIVE TO THE NOTED DIMENSIONS. NO WRINKLES, AIR BUBBLES, OR LOOSE EDGES PERMITTED.
 3. DIMENSIONS PER SFF-8301 SPECIFICATION.

Figure 6. Drive dimensions for 40-160 GB and STM3250310AS models

4.0 Serial ATA (SATA) interface

These drives use the industry-standard Serial ATA interface that supports FIS data transfers. It supports ATA programmed input/output (PIO) modes 0–4; multiword DMA modes 0–2, and Ultra DMA modes 0–6.

For detailed information about the Serial ATA interface, refer to the “Serial ATA: High Speed Serialized AT Attachment” specification.

4.1 Hot-Plug compatibility

DiamondMax 21 drives incorporate connectors which enable you to hot plug these drives in accordance with the Serial ATA Revision 2.5 specification. This specification can be downloaded from www.serialata.org.

4.2 Serial ATA device plug connector pin definitions

Table 10 summarizes the signals on the Serial ATA interface and power connectors..

Table 10: Serial ATA connector pin definitions

| Segment | Pin | Function | Definition |
|---------------|-----|----------|-------------------------------------|
| Signal | S1 | Ground | 2nd mate |
| | S2 | A+ | Differential signal pair A from Phy |
| | S3 | A- | |
| | S4 | Ground | 2nd mate |
| | S5 | B- | Differential signal pair B from Phy |
| | S6 | B+ | |
| | S7 | Ground | 2nd mate |

Key and spacing separate signal and power segments

| | | | |
|--------------|-----|----------------------|---|
| Power | P1 | V ₃₃ | 3.3V power |
| | P2 | V ₃₃ | 3.3V power |
| | P3 | V ₃₃ | 3.3V power, pre-charge, 2nd mate |
| | P4 | Ground | 1st mate |
| | P5 | Ground | 2nd mate |
| | P6 | Ground | 2nd mate |
| | P7 | V ₅ | 5V power, pre-charge, 2nd mate |
| | P8 | V ₅ | 5V power |
| | P9 | V ₅ | 5V power |
| | P10 | Ground | 2nd mate |
| | P11 | Ground or LED signal | If grounded, drive does not use deferred spin |
| | P12 | Ground | 1st mate. |
| | P13 | V ₁₂ | 12V power, pre-charge, 2nd mate |
| | P14 | V ₁₂ | 12V power |
| | P15 | V ₁₂ | 12V power |

Notes:

- All pins are in a single row, with a 1.27 mm (0.050") pitch.
- The comments on the mating sequence apply to the case of backplane blindmate connector only. In this case, the mating sequences are:
 - the ground pins P4 and P12.
 - the pre-charge power pins and the other ground pins.
 - the signal pins and the rest of the power pins.
- There are three power pins for each voltage. One pin from each voltage is used for pre-charge when installed in a blind-mate backplane configuration.
- All used voltage pins (V_x) must be terminated.

4.3 Supported ATA commands

The following table lists Serial ATA standard commands that the drive supports. For a detailed description of the ATA commands, refer to the Serial ATA: High Speed Serialized AT Attachment specification. See “S.M.A.R.T. commands” on page 42 for details and subcommands used in the S.M.A.R.T. implementation.

Table 11: Supported ATA commands

| Command name | Command code (in hex) |
|-------------------------------------|------------------------------------|
| Check Power Mode | 98 _H or E5 _H |
| Device Configuration Freeze Lock | B1 _H / C1 _H |
| Device Configuration Identify | B1 _H / C2 _H |
| Device Configuration Restore | B1 _H / C0 _H |
| Device Configuration Set | B1 _H / C3 _H |
| Device Reset | 08 _H |
| Download Microcode | 92 _H |
| Execute Device Diagnostics | 90 _H |
| Flush Cache | E7 _H |
| Flush Cache Extended | EA _H |
| Format Track | 50 _H |
| Identify Device | EC _H |
| Idle | 97 _H or E3 _H |
| Idle Immediate | 95 _H or E1 _H |
| Initialize Device Parameters | 91 _H |
| Read Buffer | E4 _H |
| Read DMA | C8 _H |
| Read DMA Extended | 25 _H |
| Read DMA Without Retries | C9 _H |
| Read Log Ext | 2F _H |
| Read Multiple | C4 _H |
| Read Multiple Extended | 29 _H |
| Read Native Max Address | F8 _H |
| Read Native Max Address Extended | 27 _H |
| Read Sectors | 20 _H |
| Read Sectors Extended | 24 _H |
| Read Sectors Without Retries | 21 _H |
| Read Verify Sectors | 40 _H |
| Read Verify Sectors Extended | 42 _H |
| Read Verify Sectors Without Retries | 41 _H |
| Recalibrate | 10 _H |
| Security Disable Password | F6 _H |
| Security Erase Prepare | F3 _H |

| Command name | Command code (in hex) |
|---|--|
| Security Erase Unit | F4 _H |
| Security Freeze | F5 _H |
| Security Set Password | F1 _H |
| Security Unlock | F2 _H |
| Seek | 70 _H |
| Set Features | EF _H |
| Set Max Address Note: Individual Set Max Address commands are identified by the value placed in the Set Max Features register as defined to the right. | F9 _H Address: 00 _H Password: 01 _H Lock: 02 _H Unlock: 03 _H Freeze Lock: 04 _H |
| Set Max Address Extended | 37 _H |
| Set Multiple Mode | C6 _H |
| Sleep | 99 _H or E6 _H |
| S.M.A.R.T. Disable Operations | B0 _H / D9 _H |
| S.M.A.R.T. Enable/Disable Autosave | B0 _H / D2 _H |
| S.M.A.R.T. Enable Operations | B0 _H / D8 _H |
| S.M.A.R.T. Execute Offline | B0 _H / D4 _H |
| S.M.A.R.T. Read Attribute Thresholds | B0 _H / D1 _H |
| S.M.A.R.T. Read Data | B0 _H / D0 _H |
| S.M.A.R.T. Read Log Sector | B0 _H / D5 _H |
| S.M.A.R.T. Return Status | B0 _H / DA _H |
| S.M.A.R.T. Save Attribute Values | B0 _H / D3 _H |
| S.M.A.R.T. Write Log Sector | B0 _H / D6 _H |
| Standby | 96 _H or E2 _H |
| Standby Immediate | 94 _H or E0 _H |
| Write Buffer | E8 _H |
| Write DMA | CA _H |
| Write DMA Extended | 35 _H |
| Write DMA FUA Extended | CD _H |
| Write DMA Without Retries | CB _H |
| Write Log Extended | 3F _H |
| Write Multiple | C5 _H |
| Write Multiple Extended | 39 _H |
| Write Multiple FUA Extended | CE _H |
| Write Sectors | 30 _H |
| Write Sectors Without Retries | 31 _H |
| Write Sectors Extended | 34 _H |

4.3.1 Identify Device command

The Identify Device command (command code EC_H) transfers information about the drive to the host following power up. The data is organized as a single 512-byte block of data, whose contents are shown in Table 11 on page 35. All reserved bits or words should be set to zero. Parameters listed with an “x” are drive-specific or vary with the state of the drive. See Section 2.0 on page 3 for default parameter settings.

The following commands contain drive-specific features that may not be included in the Serial ATA specification.

| Word | Description | Value |
|-------|--|-------------------|
| 0 | Configuration information: <ul style="list-style-type: none"> • Bit 15: 0 = ATA; 1 = ATAPI • Bit 7: removable media • Bit 6: removable controller • Bit 0: reserved | 0C5A _H |
| 1 | Number of logical cylinders | 16,383 |
| 2 | ATA-reserved | 0000 _H |
| 3 | Number of logical heads | 16 |
| 4 | Retired | 0000 _H |
| 5 | Retired | 0000 _H |
| 6 | Number of logical sectors per logical track: 63 | 003F _H |
| 7–9 | Retired | 0000 _H |
| 10–19 | Serial number: (20 ASCII characters, 0000 _H = none) | ASCII |
| 20 | Retired | 0000 _H |
| 21 | Retired | 0400 _H |
| 22 | Obsolete | 0000 _H |
| 23–26 | Firmware revision (8 ASCII character string, padded with blanks to end of string) | x.xx |
| 27–46 | Drive model number: (40 ASCII characters, padded with blanks to end of string) | MAXTOR STMxxxxx |
| 47 | (Bits 7–0) Maximum sectors per interrupt on Read multiple and Write multiple (16) | 8010 _H |
| 48 | Reserved | 0000 _H |
| 49 | Standard Standby timer, IORDY supported and may be disabled | 2F00 _H |
| 50 | ATA-reserved | 0000 _H |
| 51 | PIO data-transfer cycle timing mode | 0200 _H |
| 52 | Retired | 0200 _H |
| 53 | Words 54–58, 64–70 and 88 are valid | 0007 _H |
| 54 | Number of current logical cylinders | xxxx _H |
| 55 | Number of current logical heads | xxxx _H |
| 56 | Number of current logical sectors per logical track | xxxx _H |
| 57–58 | Current capacity in sectors | xxxx _H |
| 59 | Number of sectors transferred during a Read Multiple or Write Multiple command | xxxx _H |

| Word | Description | Value |
|-------|--|-------------------|
| 60–61 | Total number of user-addressable LBA sectors available (see Section 2.2 for related information) *Note: The maximum value allowed in this field is: 0FFFFFFFh (268,435,455 sectors, 137 Gbytes). Drives with capacities over 137 Gbytes will have 0FFFFFFFh in this field and the actual number of user-addressable LBAs specified in words 100-103. This is required for drives that support the 48-bit addressing feature. | 0FFFFFFFh* |
| 62 | Retired | 0000 _H |
| 63 | Multiword DMA active and modes supported (see note following this table) | xx07 _H |
| 64 | Advanced PIO modes supported (modes 3 and 4 supported) | 0003 _H |
| 65 | Minimum multiword DMA transfer cycle time per word (120 nsec) | 0078 _H |
| 66 | Recommended multiword DMA transfer cycle time per word (120 nsec) | 0078 _H |
| 67 | Minimum PIO cycle time without IORDY flow control (240 nsec) | 00F0 _H |
| 68 | Minimum PIO cycle time with IORDY flow control (120 nsec) | 0078 _H |
| 69–74 | ATA-reserved | 0000 _H |
| 75 | Queue depth | 0000 _H |
| 76 | Serial ATA capabilities | xxxx _H |
| 77 | Reserved for future Serial ATA definition | xxxx _H |
| 78 | Serial ATA features supported | xxxx _H |
| 79 | Serial ATA features enabled | xxxx _H |
| 80 | Major version number | 003E _H |
| 81 | Minor version number | 0000 _H |
| 82 | Command sets supported | 364B _H |
| 83 | Command sets supported | 7C03 _H |
| 84 | Command sets support extension | 4003 _H |
| 85 | Command sets enabled | 30xx _H |
| 86 | Command sets enabled | 0001 _H |
| 87 | Command sets enable extension | 4000 _H |
| 88 | Ultra DMA support and current mode (see note following this table) | xx3F _H |
| 89 | Security erase time | 0000 _H |
| 90 | Enhanced security erase time | 0000 _H |
| 92 | Master password revision code | FFFE _H |
| 93 | Hardware reset value (see description following this table) | xxxx _H |
| 95–99 | ATA-reserved | 0000 _H |

| Word | Description | Value |
|---------|--|--|
| 100–103 | Total number of user-addressable LBA sectors available (see Section 2.2 for related information). These words are required for drives that support the 48-bit addressing feature. Maximum value: 0000FFFFFFFFFh. | STM3500630AS = 976,773,168 STM3320620AS = 625,142,448 STM3320820AS = 625,142,448 STM3250824AS = 488,397,168 STM3250824AS = 488,397,168 STM3250310AS = 488,397,168 STM3160815AS = 312,581,808 STM3160215AS = 312,581,808 STM380815AS = 156,301,488 STM380215AS = 156,301,488 STM340215AS = 78,165,360 |
| 104–127 | ATA-reserved | 0000 _H |
| 128 | Security status | 0001 _H |
| 129–159 | Maxtor-reserved | xxxx _H |
| 160–254 | ATA-reserved | 0000 _H |
| 255 | Integrity word | xxA5 _H |

Note. Advanced Power Management (APM) and Automatic Acoustic Management (AAM) features are not supported

Note. See the bit descriptions below for words 63, 88, and 93 of the Identify Drive data.

| Description (if bit is set to 1) | | |
|---|------------|---|
| | Bit | Word 63 |
| | 0 | Multiword DMA mode 0 is supported. |
| | 1 | Multiword DMA mode 1 is supported. |
| | 2 | Multiword DMA mode 2 is supported. |
| | 8 | Multiword DMA mode 0 is currently active. |
| | 9 | Multiword DMA mode 1 is currently active. |
| | 10 | Multiword DMA mode 2 is currently active. |
| | Bit | Word 88 |
| | 0 | Ultra DMA mode 0 is supported. |
| | 1 | Ultra DMA mode 1 is supported. |
| | 2 | Ultra DMA mode 2 is supported. |
| | 3 | Ultra DMA mode 3 is supported. |
| | 4 | Ultra DMA mode 4 is supported. |
| | 5 | Ultra DMA mode 5 is supported. |
| | 6 | Ultra DMA mode 6 is supported. |
| | 8 | Ultra DMA mode 0 is currently active. |
| | 9 | Ultra DMA mode 1 is currently active. |
| | 10 | Ultra DMA mode 2 is currently active. |
| | 11 | Ultra DMA mode 3 is currently active. |
| | 12 | Ultra DMA mode 4 is currently active. |
| | 13 | Ultra DMA mode 5 is currently active. |
| | 14 | Ultra DMA mode 6 is currently active. |

4.3.2 Set Features command

This command controls the implementation of various features that the drive supports. When the drive receives this command, it sets BSY, checks the contents of the Features register, clears BSY and generates an interrupt. If the value in the register does not represent a feature that the drive supports, the command is aborted. Power-on default has the read look-ahead and write caching features enabled. The acceptable values for the Features register are defined as follows:

Table 12: Set Features command values

| | |
|-----------------|--|
| 02 _H | Enable write cache (<i>default</i>). |
| 03 _H | Set transfer mode (based on value in Sector Count register). Sector Count register values: 00 _H Set PIO mode to default (PIO mode 2). 01 _H Set PIO mode to default and disable IORDY (PIO mode 2). 08 _H PIO mode 0 09 _H PIO mode 1 0A _H PIO mode 2 0B _H PIO mode 3 0C _H PIO mode 4 (<i>default</i>) 20 _H Multiword DMA mode 0 21 _H Multiword DMA mode 1 22 _H Multiword DMA mode 2 40 _H Ultra DMA mode 0 41 _H Ultra DMA mode 1 42 _H Ultra DMA mode 2 43 _H Ultra DMA mode 3 44 _H Ultra DMA mode 4 45 _H Ultra DMA mode 5 46 _H Ultra DMA mode 6 |
| 10 _H | Enable use of SATA features |
| 55 _H | Disable read look-ahead (read cache) feature. |
| 82 _H | Disable write cache |
| 90 _H | Disable use of SATA features |
| AA _H | Enable read look-ahead (read cache) feature (<i>default</i>). |
| F1 _H | Report full capacity available |

Note. At power-on, or after a hardware or software reset, the default values of the features are as indicated above.

4.3.3 S.M.A.R.T. commands

S.M.A.R.T. provides near-term failure prediction for disc drives. When S.M.A.R.T. is enabled, the drive monitors predetermined drive attributes that are susceptible to degradation over time. If self-monitoring determines that a failure is likely, S.M.A.R.T. makes a status report available to the host. Not all failures are predictable. S.M.A.R.T. predictability is limited to the attributes the drive can monitor. For more information on S.M.A.R.T. commands and implementation, see the *Draft ATA-5 Standard*.

This drive is shipped with S.M.A.R.T. features disabled. You must have a recent BIOS or software package that supports S.M.A.R.T. to enable this feature. The table below shows the S.M.A.R.T. command codes that the drive uses.

Table 13: S.M.A.R.T. commands

| Code in features register | S.M.A.R.T. command |
|---------------------------|--|
| D0 _H | S.M.A.R.T. Read Data |
| D2 _H | S.M.A.R.T. Enable/Disable Attribute Autosave |
| D3 _H | S.M.A.R.T. Save Attribute Values |
| D4 _H | S.M.A.R.T. Execute Off-line Immediate (runs DST) |
| D5 _H | S.M.A.R.T. Read Log Sector |
| D6 _H | S.M.A.R.T. Write Log Sector |
| D8 _H | S.M.A.R.T. Enable Operations |
| D9 _H | S.M.A.R.T. Disable Operations |
| DA _H | S.M.A.R.T. Return Status |

Note. If an appropriate code is not written to the Features Register, the command is aborted and 0x04 (abort) is written to the Error register.

5.0 Maxtor support services

Before contacting Maxtor Support, use the Hard Disk Information feature in MaxBlast to view the model number and serial number of your drive. These numbers can be used to get help from Maxtor Support, register your drive, and look up information on the Maxtor website.

Please visit <http://www.seagate.com/maxtor/> to obtain comprehensive support information, such as:

- **Warranty services**
Drive returns, warranty status, and limited warranty statement.
- **Product support**
Installation tutorials, specifications, jumper settings, installation guides, and product manuals.
- **Software downloads**
Installation software, utilities, and diagnostics.
- **Knowledge Base**
Troubleshooting information, FAQs, and resolved problem database.
- **Product Index**
Current and legacy Maxtor products listing.

Click on Maxtor Product Support to access the Knowledge Base, download software updates, register your drive, and get assistance via e-mail
